HITTERS Sports Academy — Platform Proposal

Oct 3, 2026 · @Hefny

Executive summary

HITTERS Sports Academy is a premium multi-location padel platform: players book courts, get officially assessed into levels A to D, find matches and train with the academy; staff run every club from one admin. As of 3 October 2026 the foundation is live in the repository `Amrwar/hitters-sports-academy`: brand design system, accounts and roles, locations and courts with timezone-aware availability and pricing, a court reservation system that cannot double-book, the player profile and assessment workflow, games organized on bookings with invitations and lineups, rules-based matchmaking with explainable recommendations, join requests, pairs and challenges, and the academy: coach profiles and availability, private lessons, programs with waitlists and attendance, and prepaid lesson packages. The next phases are memberships and online payments, then tournaments, leagues and reviews.

Area	Status	Where
Design system and brand marks	Done	`/design-system`, every page
Accounts, 8 roles, location-scoped permissions	Done, 37 tests	Login, register, admin members and staff
Locations, courts, hours, closures, pricing rules	Done, 20 tests	Admin locations, courts, calendar; player locations
Court reservations, cancellation, rescheduling, staff bookings	Done, 14 tests	`/app/book`, `/app/bookings`, admin bookings
Player profiles and assessment workflow (request, schedule, record, history)	Done, 8 tests	`/app/profile`, admin assessments
Games on bookings: formats, invitations, lineup states, discovery	Done, 13 tests	/app/play, booking detail, admin games
Matchmaking (solo, pair, 3+1), join requests	Done, 14 tests	Play (For you, Requests), Find a match, game page, pairs, admin settings

Area	Status	Where
Academy: trainers, lessons, programs, packages	Done, 10 tests	/app/trainers, /app/lessons, /app/programs, /app/packages; admin coaching, trainers, programs, packages
Analytics, tournaments and leagues, reviews	Planned	
Memberships and online payments	Next	—

What is deliberately not built yet: online payment processing (bookings are pay-at-venue), email delivery (links are logged until a provider is chosen), and photo uploads (images are URLs until object storage is connected).

Product vision

One HITTERS account works at every club: a player books in three taps, is placed at an official level by a certified assessor, and never shows up without a fourth because matchmaking fills the court with people at their level. Owners run all locations from one admin with location-scoped staff, live calendars and finance in one place.

For players (mobile-first app)

- Browse clubs with photos, hours, facilities and live court availability; book, reschedule or cancel with the club's policy applied automatically.
- Hold an official A to D level, request assessments and reassessments, and see every past result.
- Open or join sessions solo, as a pair, or as three looking for a fourth; organisers approve join requests.
- Train with private trainers, enrol in programs and packages, and keep a full booking, match and training history.
- Memberships with member pricing, online payment with receipts, notifications for everything that affects their play.

For staff (desktop-first admin)

- Receptionists book for members and walk-ins, take venue payments and record attendance.
- Assessors run the assessment queue; trainers log sessions; location managers own courts, hours, closures, pricing and their team.

- Owners see every location, configure levels and policies, and read analytics across the academy.

Later phases add tournaments and leagues with standings, reviews with moderation, and provider integrations for payments, email, SMS and object storage.

Experience	Design rule
Player app	480 px column, bottom tab bar, dark navy surfaces, electric blue actions, one brand card per screen
Admin	Dark sidebar, light content area, dense tables and calendars, every action audited
Both	Same component library, same status colours, same HITTERS marks traced from the brand references

How the application is built

Every business rule lives in one service layer that checks permissions on every call; pages and buttons only decide what to show. The stack is Next.js 15 with React 19 and TypeScript, Tailwind 3.4, Prisma 6 on PostgreSQL 16, and Vitest, deployed on Vercel with a hosted Postgres.

Layer	What it does	Where
Routes	Marketing site, auth screens, player app (`/app`), admin (`/admin`)	`src/app`
Design system	Brand marks, tokens, 25+ components, navigation shells	`src/components`
Server actions	Thin wrappers: read the session cookie, call a service, return a result the UI can render	`src/server/actions`
Services	All rules: authorization, validation, transactions, audit rows, notifications	`src/server/services`
Engines	Pure, unit-tested functions: slot availability, pricing rules, timezone maths	`availability.ts` , `pricing.ts` , `lib/time.ts`

Layer	What it does	Where
Data	Prisma schema, migrations, seed	`prisma/`

Security model. One account per person. Super Admin and Academy Owner are global; Location Manager, Receptionist, Trainer, Assessor and Finance Manager are granted per location; everyone is a Player. Permissions are strings in a matrix seeded into the database, and a location role never satisfies a global permission. Passwords use scrypt, sessions are hashed random tokens in an httpOnly cookie, and login, registration and resets are rate limited and audited.

Data integrity. Unique constraints on email, phone, court names per location, staff roles per location and token hashes. Double booking is impossible: a PostgreSQL exclusion constraint on court and time range rejects overlapping active bookings even under concurrent requests, and the service locks the court row first so most races fail politely.

Quality process. Every phase ships with typecheck, production build, an automated test suite against a real test database (allowed and denied cases for every role, cross-location denials, concurrency races), and a browser walkthrough of each new screen. Builds regenerate the Prisma client, apply migrations and sync the permission matrix before deploying.

Design system

The application looks like the HITTERS brand references, not a generic booking tool: the wordmark and the two-slab H monogram were traced from the reference images pixel by pixel (28 degree italic, stroke 45 percent of cap height) and are rendered as vectors everywhere. The live style guide is at `/design-system`; the rules are in `docs/DESIGN_SYSTEM.md`.

Token group	Choice
Colour	Navy 950 to 700 for surfaces, royal to electric blue for actions and glow, light blue for secondary text, white type, volt lime only for live states and level A, four status colours
Typography	Manrope only; 11 steps from 56 px display to an 11 px overline; tabular numerals for times and prices
Shape	Radius 6 to 32 px, rounded cards and pills, diagonal court-line motif on hero cards

Token group	Choice
Depth	Navy elevation shadows plus three levels of electric glow for primary, selected and hovered elements
Surfaces	Dark hierarchy for the player app (canvas, card, input, popover); light hierarchy for the admin content area beside a navy sidebar

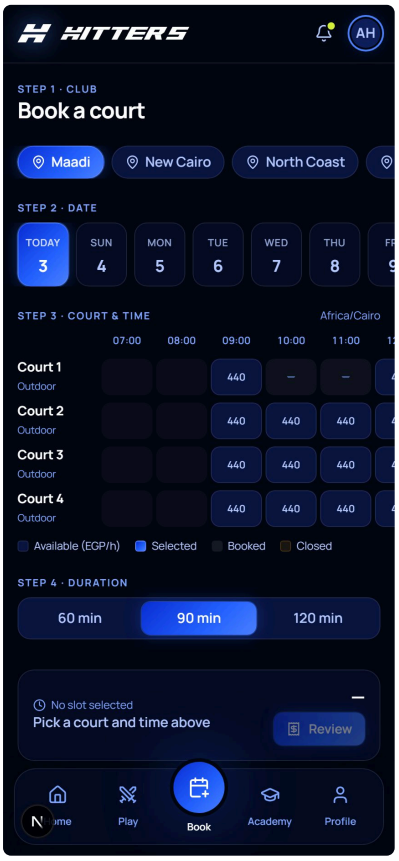

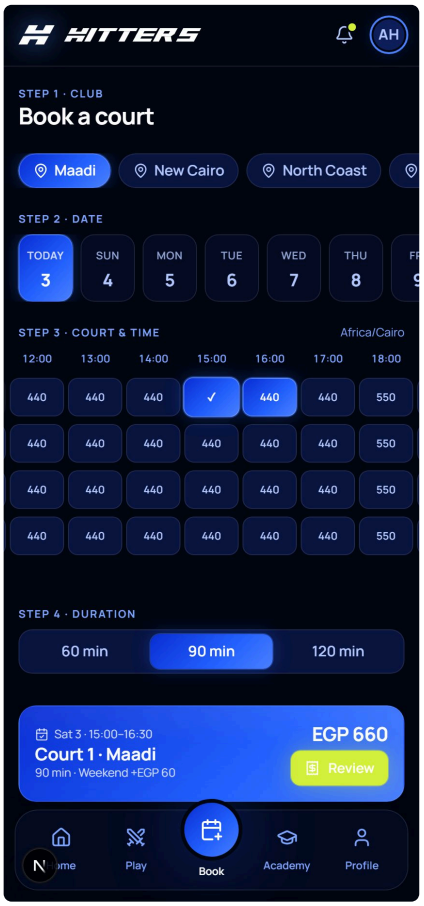

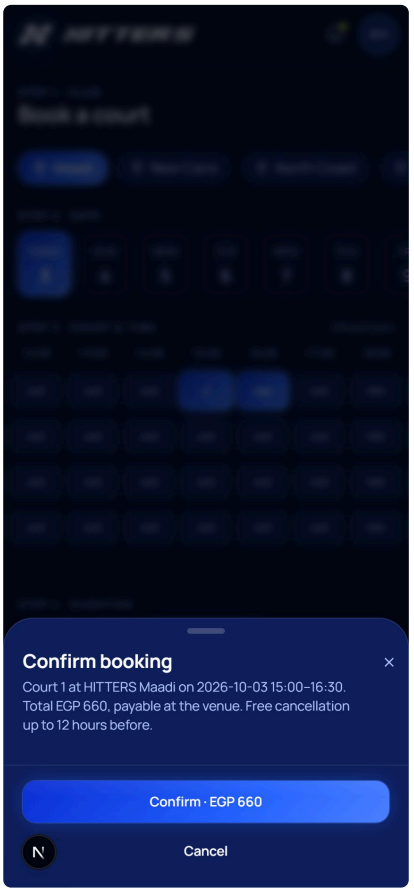

Components (one library for both apps). Buttons in seven variants and four sizes, inputs, selects, dropdowns, cards, modal that becomes a bottom sheet on phones, tables, tabs and segmented controls, badges including status and level chips, alerts, toasts, avatars, calendar and date strip, chips, switches, progress bars, stat tiles, and empty, loading, error and confirmation states. Every interactive element has defined hover, focus, active, disabled and loading states.

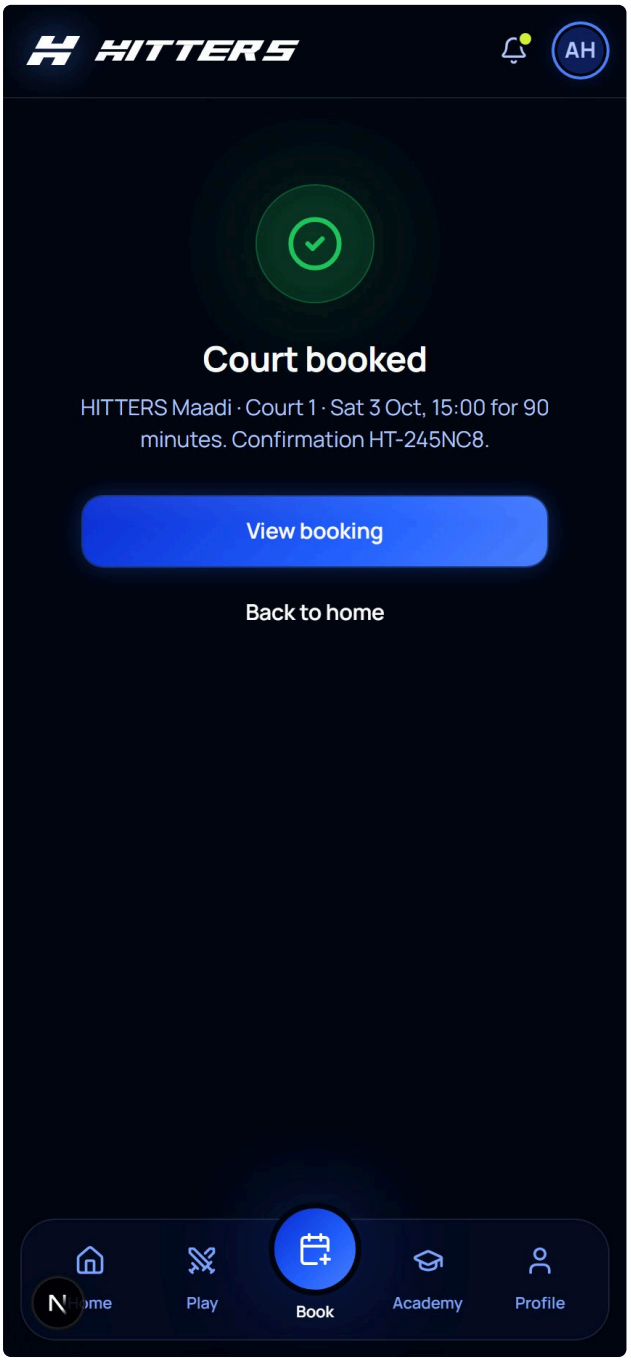

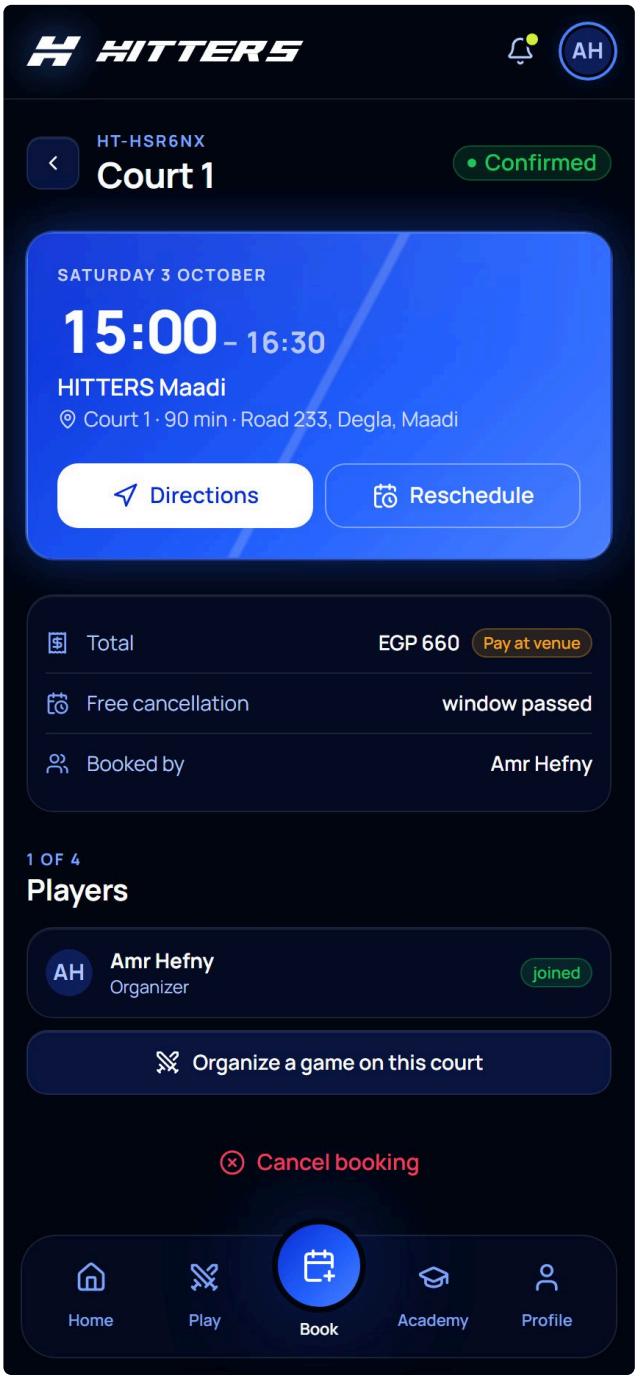

Navigation. Player app: top bar with the marks, notifications and avatar; bottom tab bar with a glowing centre Book action. Admin: fixed navy sidebar grouped into Overview, Operations and People, a light content area with breadcrumbs and search, and a drawer below the large breakpoint.

Completed functionality, shown in the design

Every flow below runs against the real database today; the captures are from the seeded development environment on 3 October 2026 (phone frame 430 px, desktop 1440 px).

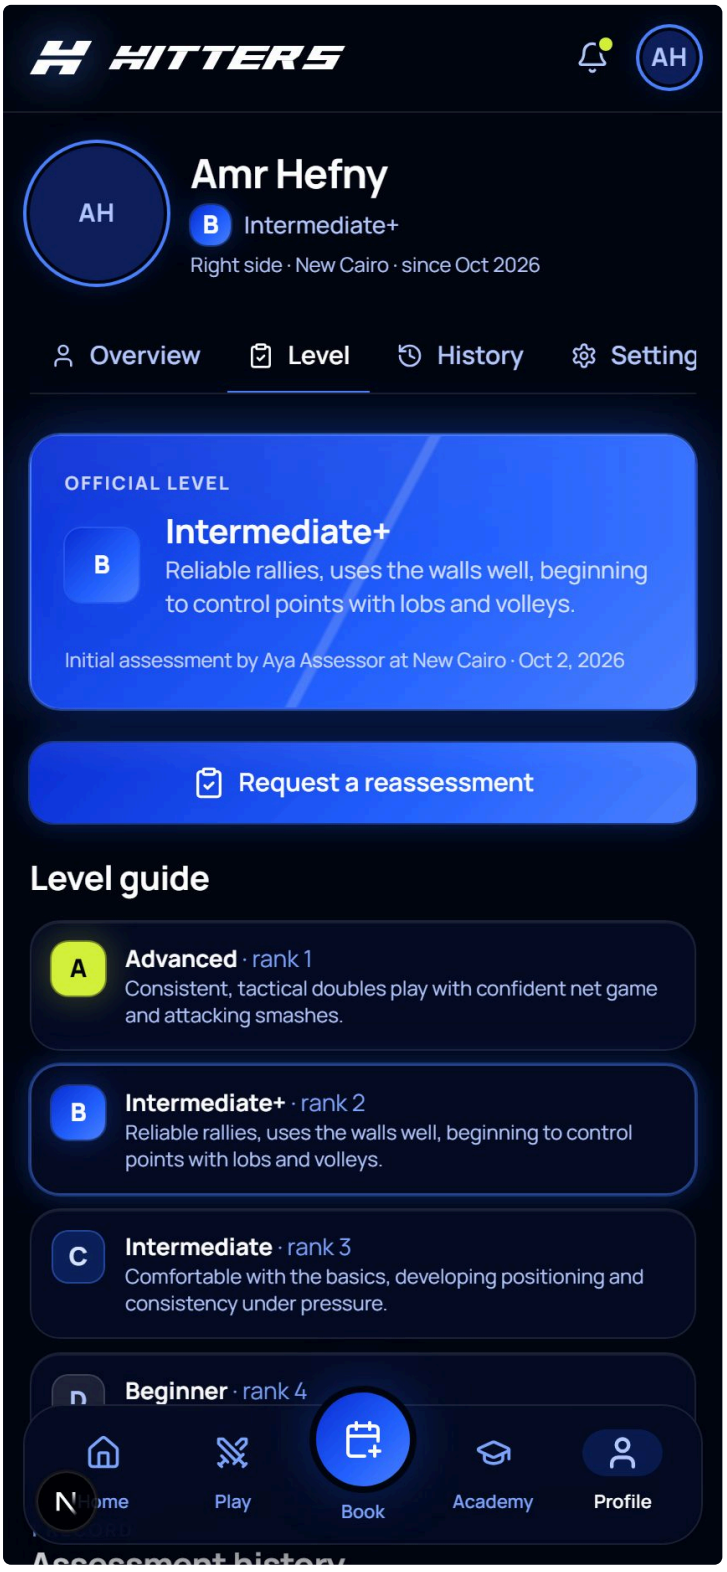

Flow 1 · Book a court (player). Choose a club and date, tap a free slot on the live grid, pick a duration, review the price with the pricing-rule breakdown, confirm, and land on the booking with its confirmation code. Overlapping requests are rejected at the database level.

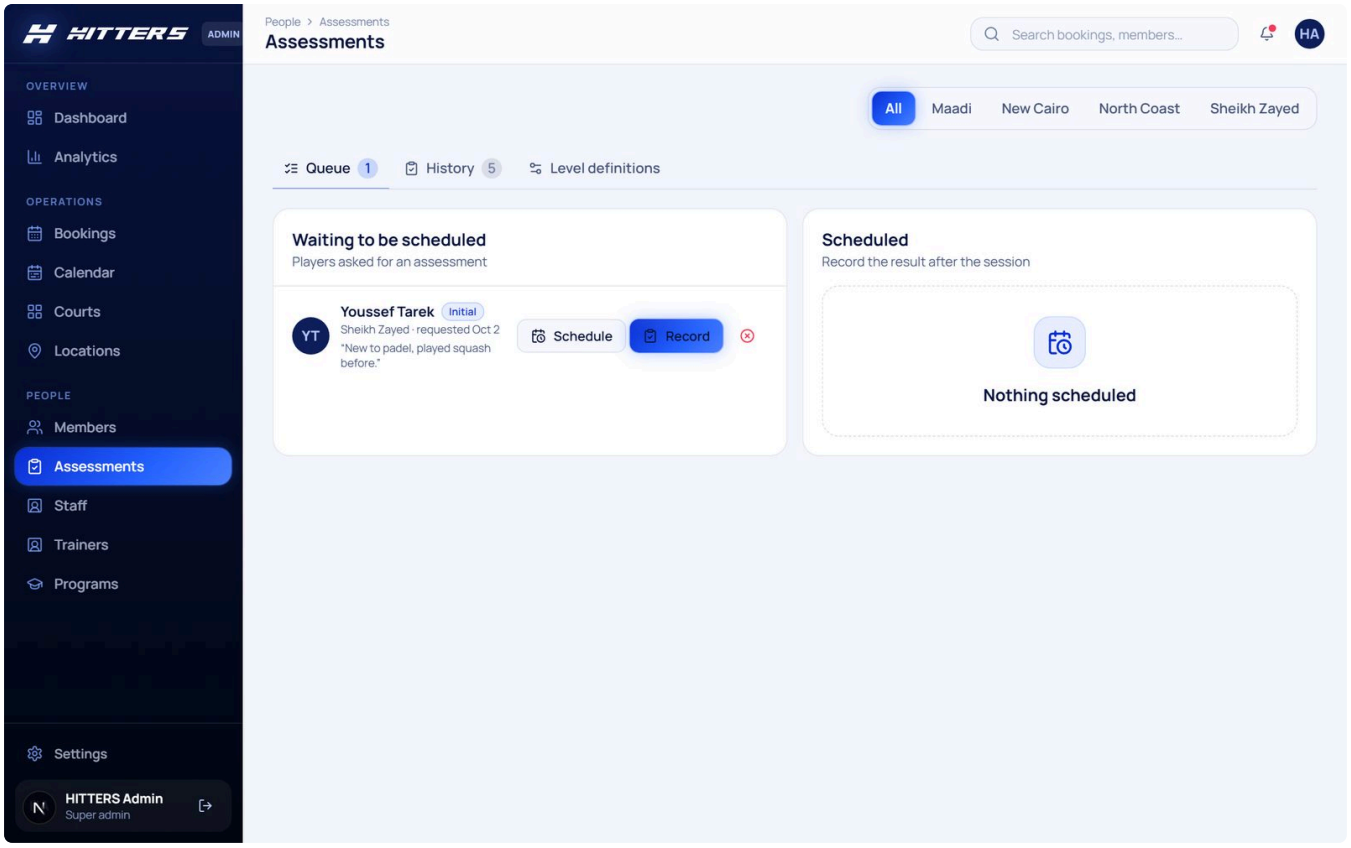

Court grid with prices	Slot selected, price review	Confirm sheet
		

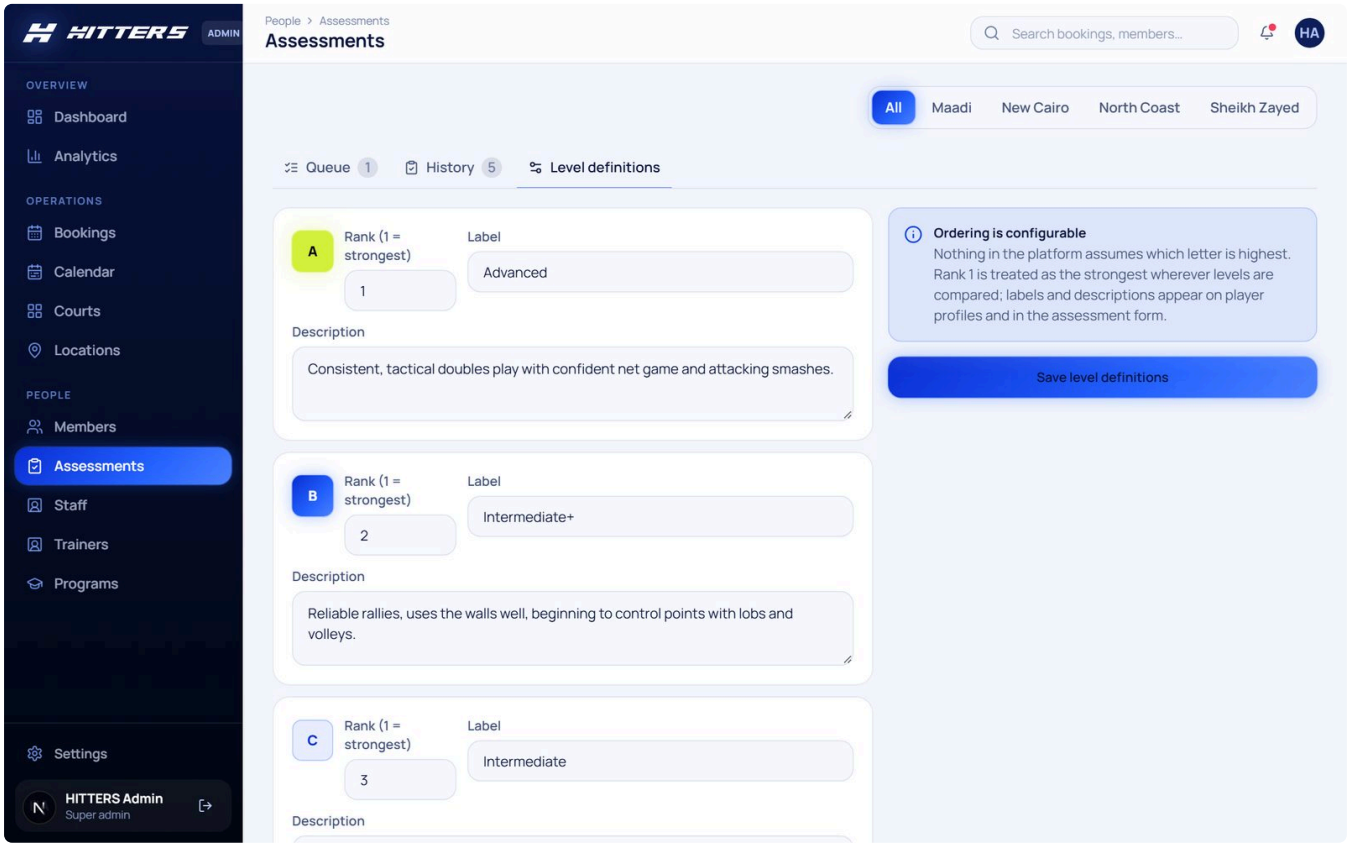

Booked	Booking detail with cancel and reschedule
	

Flow 2 · Official level (player and assessor). The player sees the official level with its description and requests an assessment; staff schedule it with an assessor at the club; the assessor records the result, which assigns the level, keeps every previous result and notifies the player. Level order and wording are configured by the academy, not hard-coded.

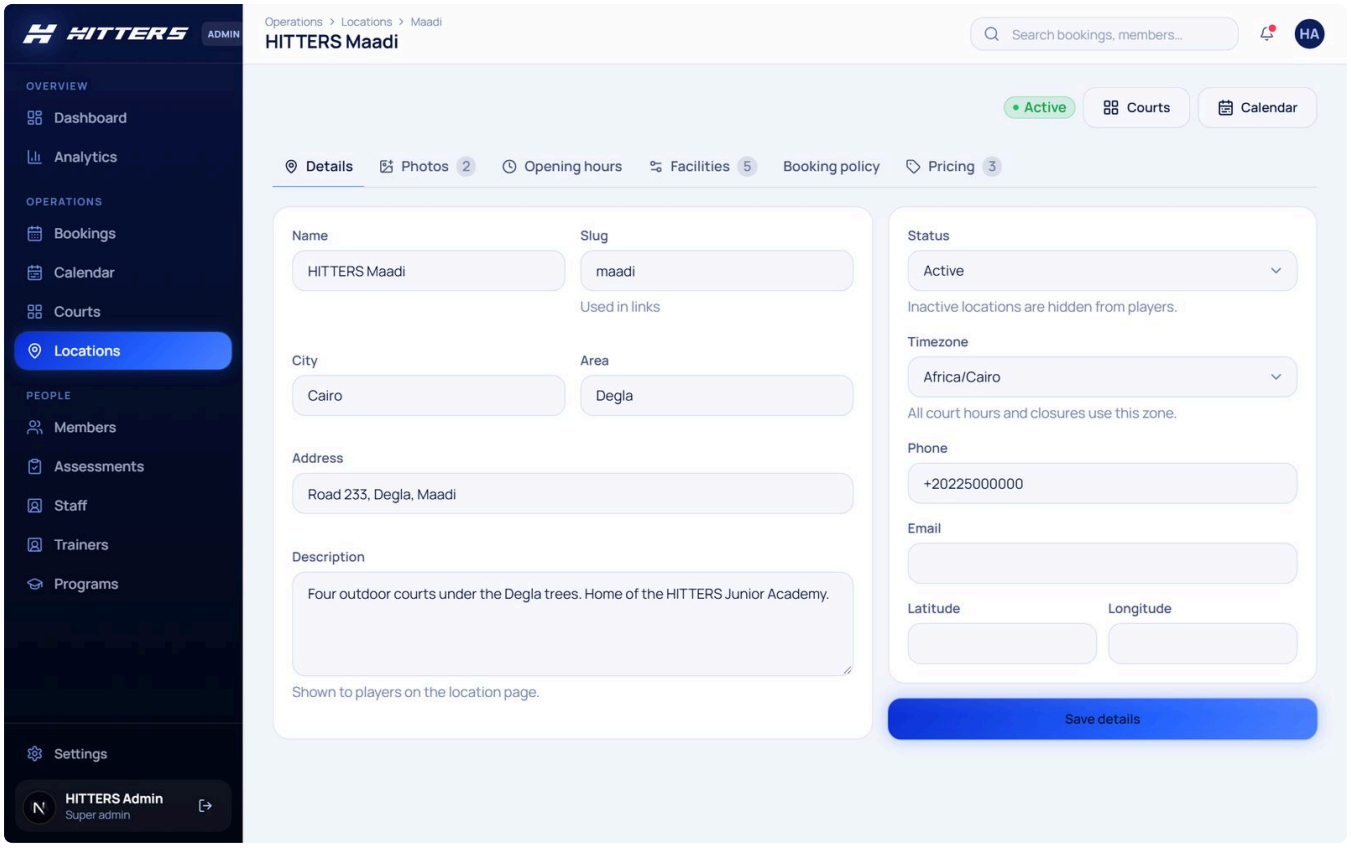

Player level tab

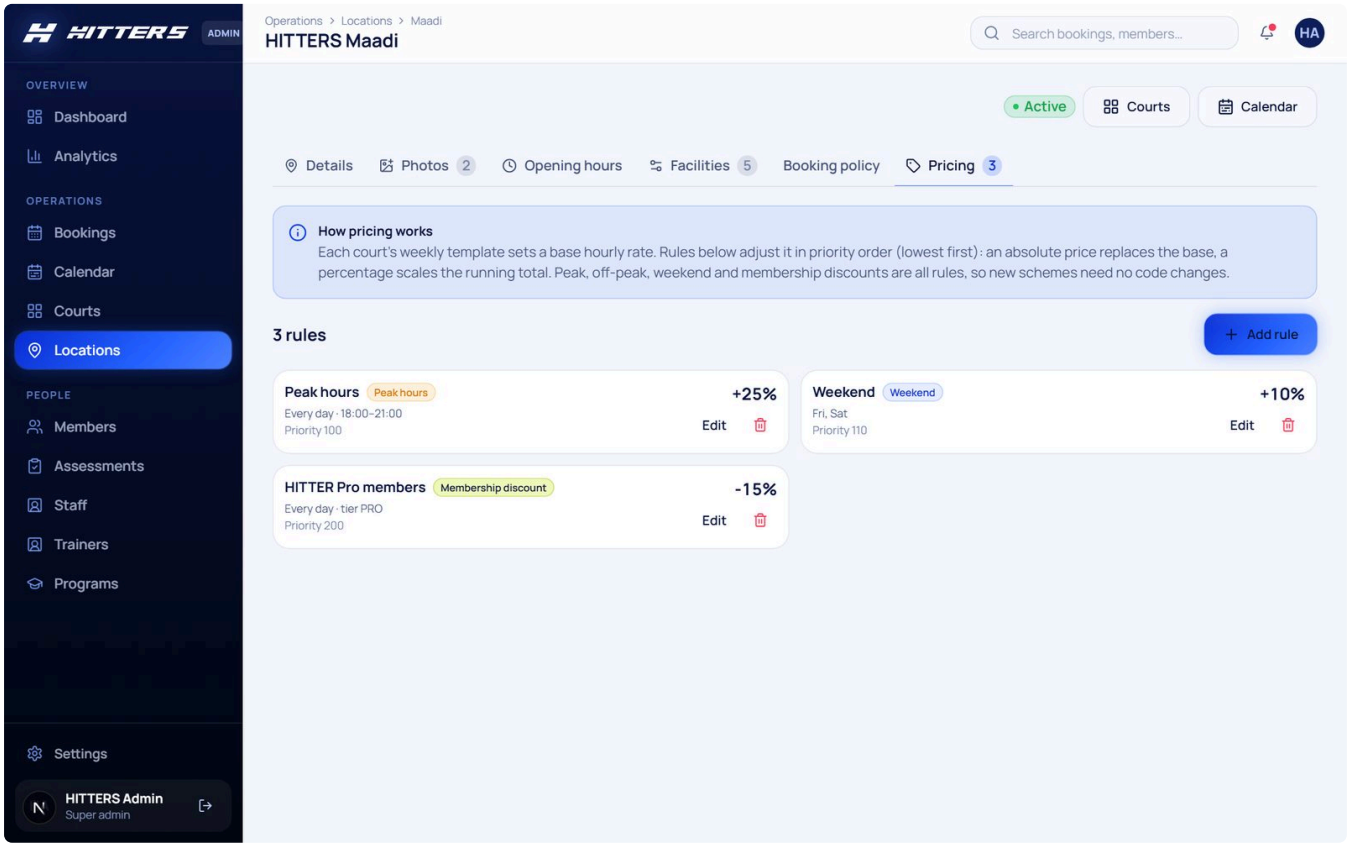

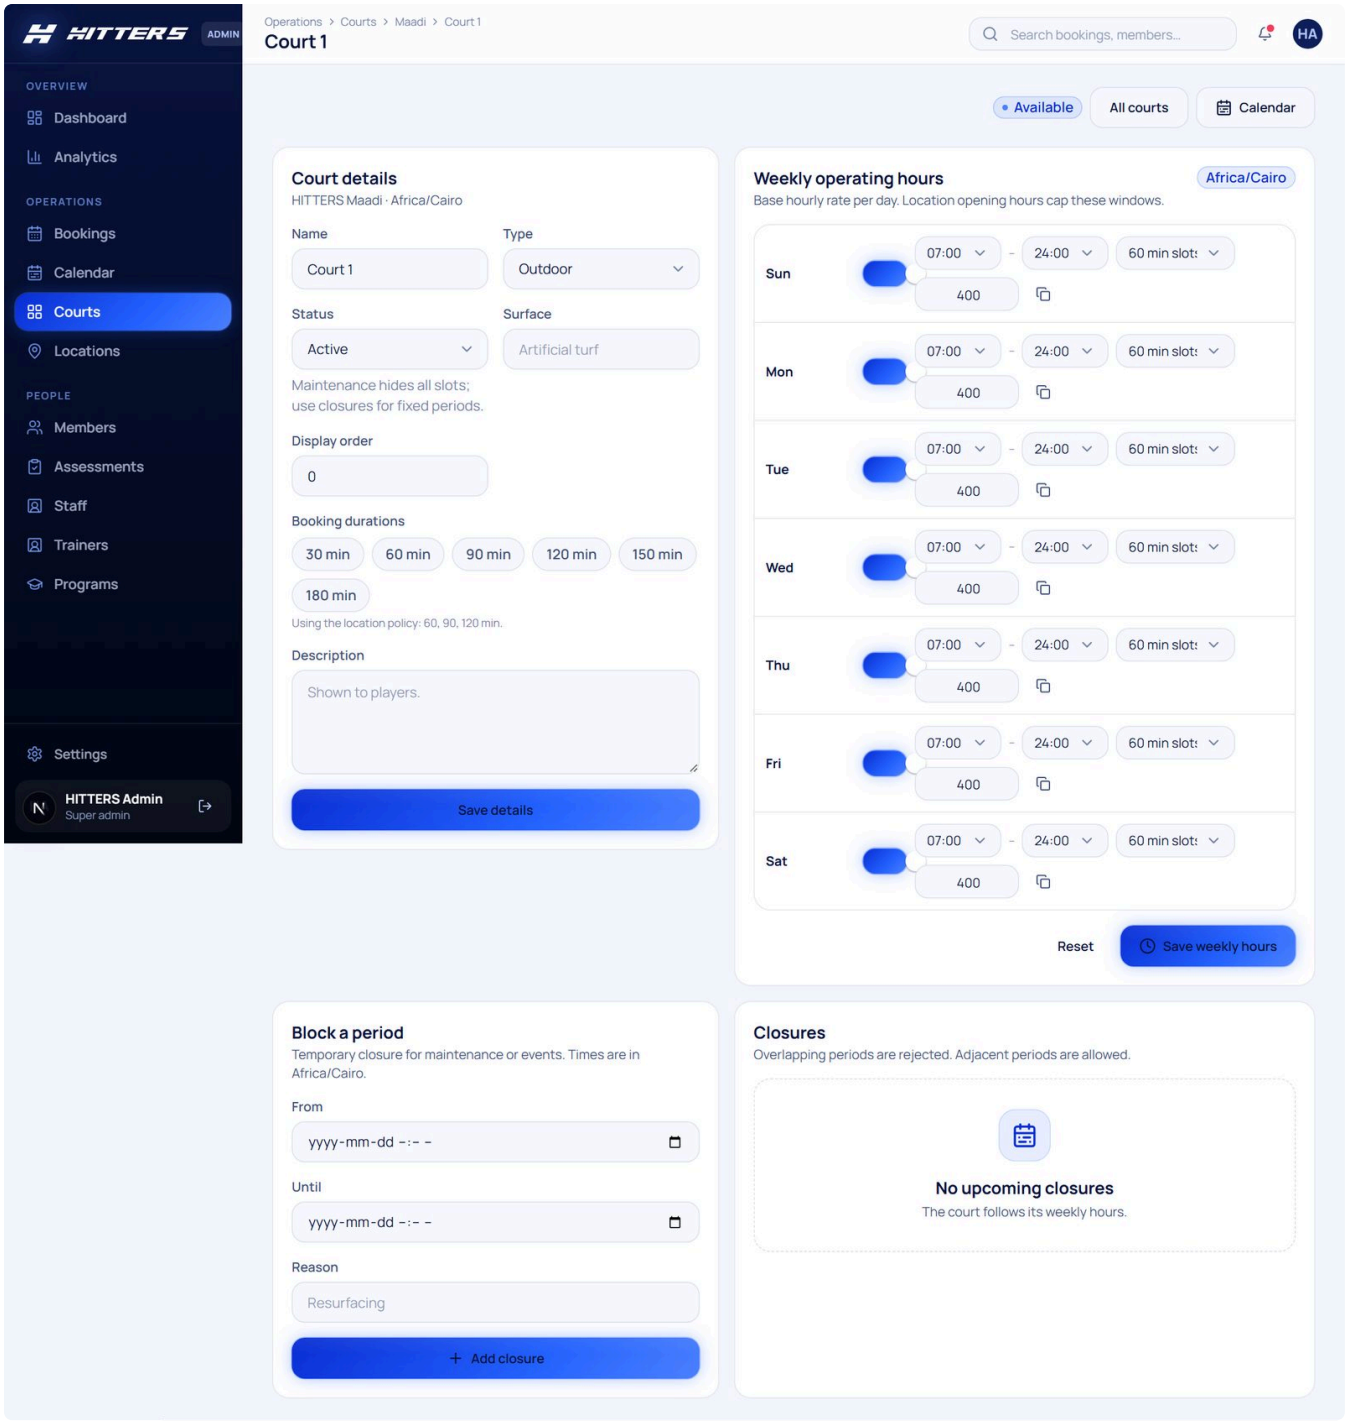

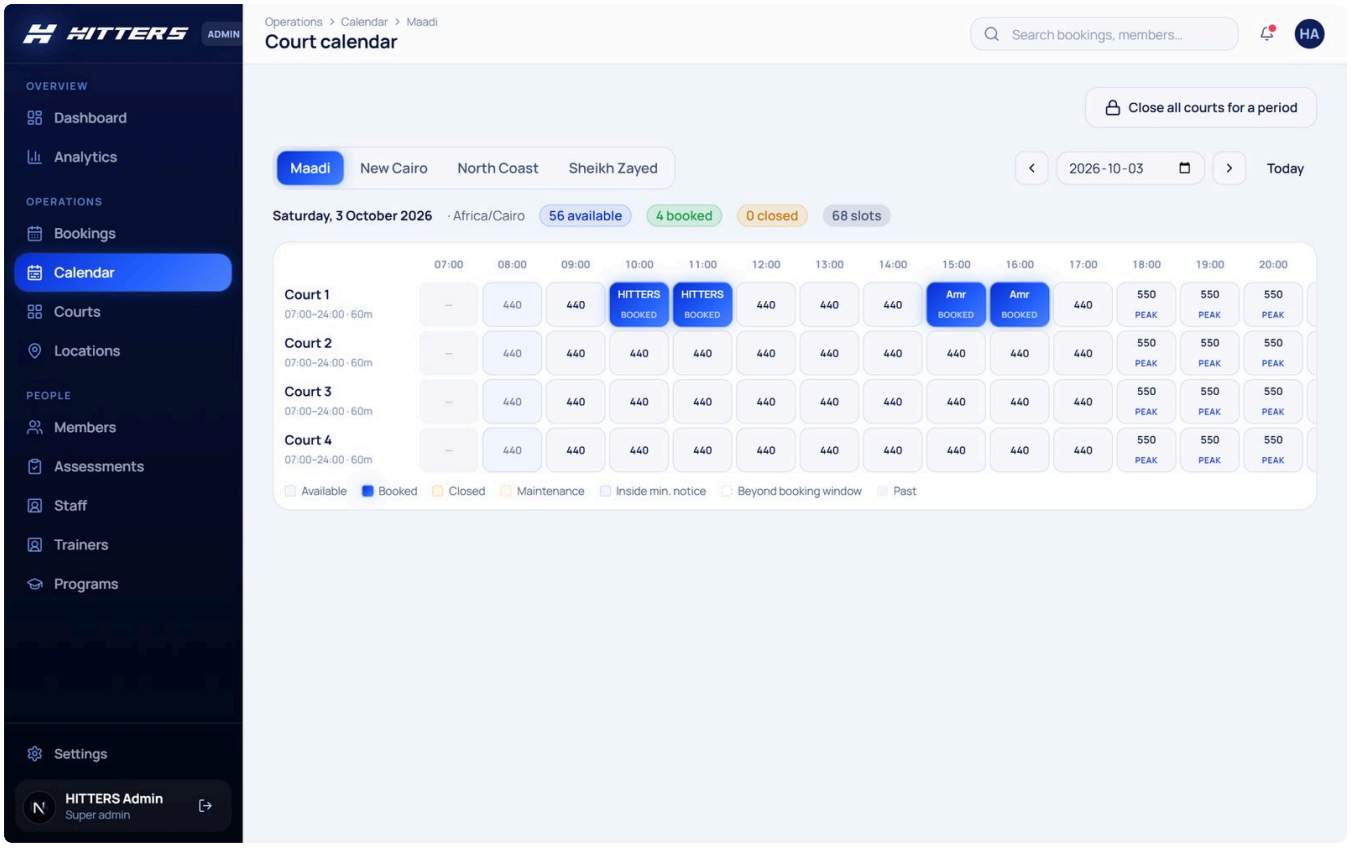

Flow 3 · Run a club (location manager). Edit details, photos, opening hours, facilities, booking policy and pricing rules; set each court's weekly template and base rate; block periods; read the day on the court calendar with booked cells linking to the booking.

How pricing works
Each court's weekly template sets a base hourly rate. Rules below adjust it in priority order (lowest first): an absolute price replaces the base, a percentage scales the running total. Peak, off-peak, weekend and membership discounts are all rules, so new schemes need no code changes.

No upcoming closures
The court follows its weekly hours.

Flow 4 · Front desk (receptionist). Book for a member or a walk-in, cancel late with a reason, mark completed or no-show after the start time, and record cash or card payment at the venue.

Flow 5 · Organize a game (player). From one of their own bookings the organizer picks a format (doubles, singles or an open count), the levels welcome, who to invite, whether the game is discoverable and how the court is paid. Invited players accept or decline themselves; nobody is added automatically. The game moves draft → open → full → confirmed, then in progress and completed by the clock; a drop-out reopens the spot. Staff see every game at their clubs and can cancel one.

Organizer view	Invited player	Ranked matches with reasons
		

Flow 6 · Find a match and request to join (player and organizer). A solo player sets a day, a time window and clubs (or just opens Play); the engine ranks every discoverable open game for their official level and explains each result: “Level B match”, “Preferred location”,

“Available at your selected time”, “1 spot remaining”. Location ranks but never hides a game; the date and time window do. The player requests one spot, or both spots as a confirmed pair; a full game can be waitlisted. The organizer reviews profile, level, spots needed, compatibility now and games played together, then accepts or declines. Acceptance reserves the spots in one locked transaction, so two simultaneous approvals cannot overfill a game and a pair is never split; everyone affected is notified. Pairs confirm each other, and a pair can open a challenge that only another pair may take. Adjacent levels are allowed only when both the game and the academy permit them. No AI: a rules engine, deterministic and tested. Screens are in the Matchmaking pages tab.

Flow 7 · Coaching and programs (player, trainer and staff). A player browses coaches by club and level, opens a profile, picks a club, a day and a free time inside the coach's published hours, and books a 60 or 90 minute lesson paid at the venue or with a credit from a prepaid package. Coaches who do not auto-confirm receive a request and accept or decline. Either side can reschedule or cancel up to 12 hours before; a package credit returns on cancellation and follows a reschedule. After the lesson the coach marks it completed or no-show and writes a progress note, private or shared with the player; completed lessons and attended program sessions join the player's training history. Staff create programs (beginner to competitive, juniors with age limits, intensives, group coaching) with a weekly schedule that generates dated sessions, a level requirement, capacity, price and rules; players enroll or join an ordered waitlist that promotes automatically when a place opens, and the coach marks attendance per session. Packages of 5, 10 or a custom number of lessons track credits bought, used, left and expiry. A trainer never sees another trainer's lessons, students or notes. Screens are in the Academy pages tab.

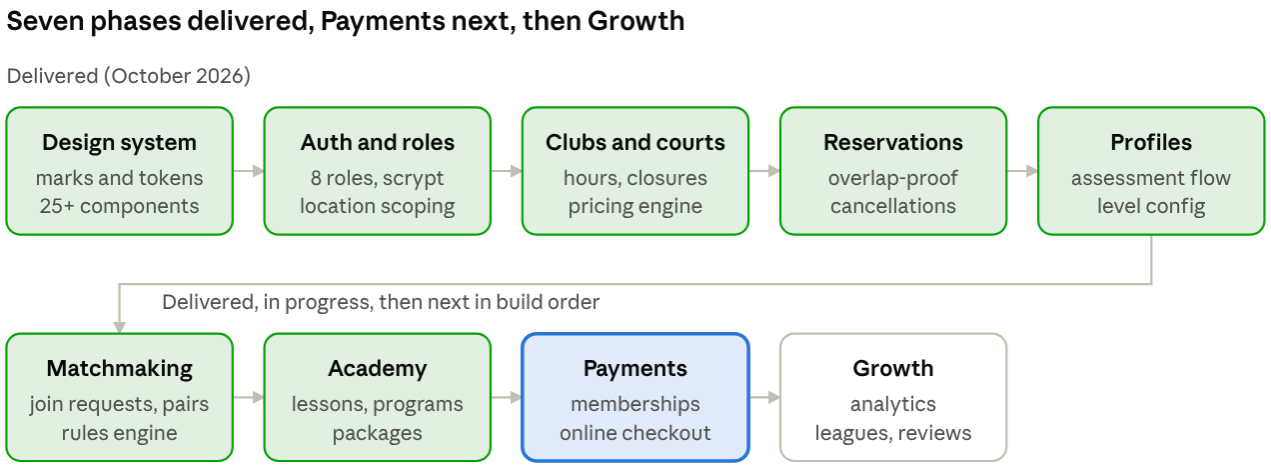

Phase	Delivered	Automated tests
Design system	Brand marks, tokens, components, every screen	Build and type checks
Accounts and roles	Register, verify, login, reset, sessions, 8 roles, location scoping, audit	37
Clubs and courts	Photos, hours, facilities, policy, pricing engine, closures, calendar	20
Reservations	Booking, participants, payments, cancel, reschedule, attendance, no double booking	14
Profiles and assessments	Profile, preferences, request-schedule-record workflow, level changes, configurable levels, training history	8

Phase	Delivered	Automated tests
Games	Sessions on bookings, formats, invitations players accept themselves, draft to completed states, discovery, organizer controls, admin list, booking cascade	13
Matchmaking	Deterministic rules engine with explanations, find a match, join requests (solo and pair) with waitlist, organizer review and approval under row locks, pairs and challenges, academy rules	14
Academy	Trainer profiles and weekly availability, overlap-proof private lessons with requests, policy, reschedule, attendance and notes, programs with generated sessions, level and age rules, capacity, waitlist and attendance, prepaid packages with credits and expiry, venue payments	10

Every screen is captured page by page in the `Player app pages` and `Admin pages` tabs.

Roadmap and next steps

Each phase builds on the previous one, so the order is fixed by dependencies: matchmaking needs reservations and official levels, academy products need trainers and bookings, payments need everything that can be charged.

build roadmap · 9 phases, dependency order

Green phases are delivered; the blue phase, Payments, is next; Growth follows.

Phase	Scope	Depends on
Matchmaking	Delivered: games on bookings, rules-based matching with explanations, join requests with organiser approval, solo and pair requests, pair challenges, waitlist, adjacent-level rule	Reservations, profiles and levels
Academy	Delivered: coach profiles and availability, private lessons with requests and policy, programs with waitlist and attendance, prepaid packages with credits	Bookings, training records
Payments	Membership tiers and benefits, online checkout with a provider, receipts, refunds, member pricing through the existing pricing rules	Bookings, memberships
Growth	Analytics dashboards, tournaments and leagues with standings, reviews with moderation, provider integrations for email, SMS, push and object storage	All of the above

How everything looks at the end

The finished platform keeps the screens that exist today and deepens each one; no page is thrown away. Below is the end state per page, with what is live now in the first column and what the remaining phases add in the second.

Player app

Page	Live today	Added by later phases
Home	Greeting, official level, next booking, quick actions, upcoming bookings	Live match at your club, open sessions needing a player, membership credits, program progress
Book	Club, date, live court grid, duration, price review, confirmation	Member pricing applied automatically, package credits, pay online or at venue
My bookings	Upcoming and history, detail with cancel and reschedule	Participants from matchmaking, scores, receipts

Page	Live today	Added by later phases
Play	For you (ranked matches with reasons), Find a match, My games, Requests, pairs; organize a game on a booking	Match history and scores, availability-based reminders, member-only games
Locations	Live clubs, photos, hours, facilities, courts and today's availability	Reviews and ratings, trainer roster per club
Profile	Photo, preferences, preferred clubs and times, official and self-reported level, assessment workflow, booking, match and training history	Match results and stats, membership card, package balances, reviews received
Academy	Coaches with availability and lesson booking, lessons with reschedule and notes, programs with enrollment, waitlist and attendance, packages with credits	Online payment for lessons, programs and packages; member pricing on coaching
Notifications	Booking, assessment and staff notifications in app	Email, SMS and push delivery through providers

Admin

Page	Live today	Added by later phases
Dashboard	Today's bookings, occupancy by hour, revenue to date, members	Matchmaking fill rate, program enrolment, membership churn
Bookings and calendar	Filtered list, manual and receptionist bookings, cancel, attendance, venue payments, booked cells on the court calendar	Online payment status, refunds, session participants
Locations and courts	Details, photos, hours, facilities, policy, pricing rules, weekly templates, closures	Per-location analytics and reviews moderation
Members	Scoped member list, member detail with assessments, bookings, training, level change	Memberships and packages per member, match history and stats

Page	Live today	Added by later phases
Assessments	Request queue, scheduling, results, history, configurable level definitions	Assessor calendar integration
Staff	Grant and revoke location roles with audit	Trainer schedules and payouts
Analytics, trainers, programs	Sample data	Real reporting, trainer management, program and package administration
Tournaments, leagues, reviews	Not started	Brackets and standings, registration, review moderation queue

The design does not change at the end: the same navy and electric blue system, the same components and the same brand marks carry every new feature.

Change log

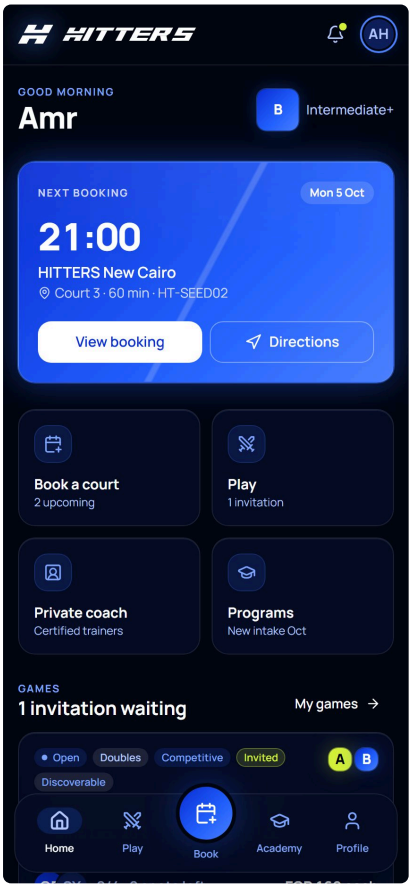

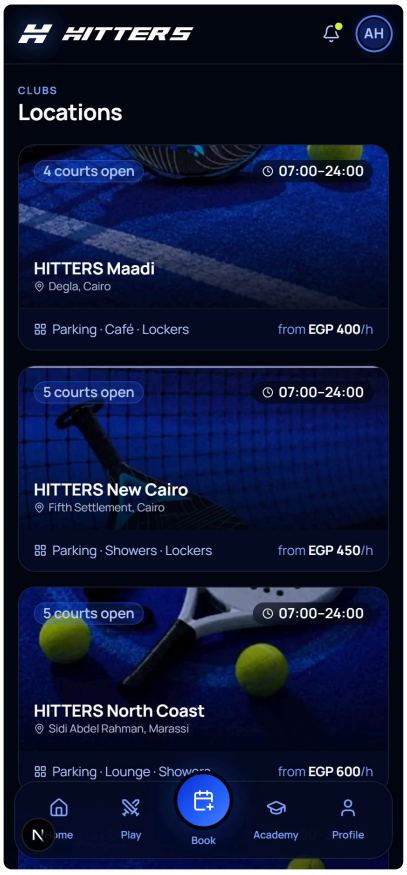

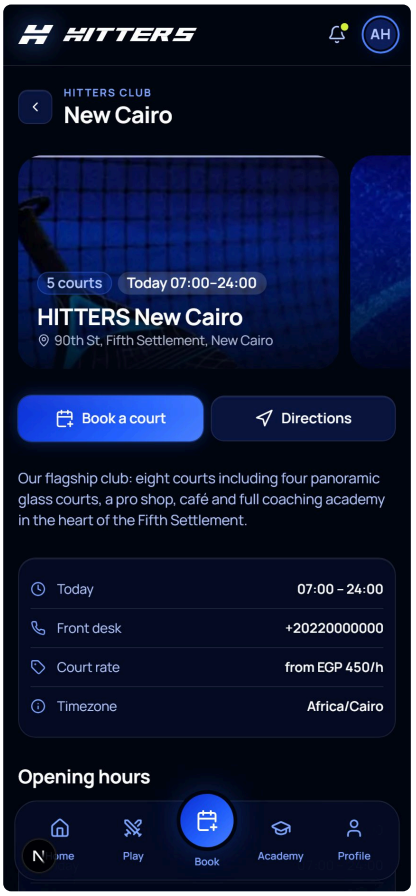

One row per delivered phase, newest first. Commits are on the `main` branch of `Amrwar/hitters-sports-academy`.

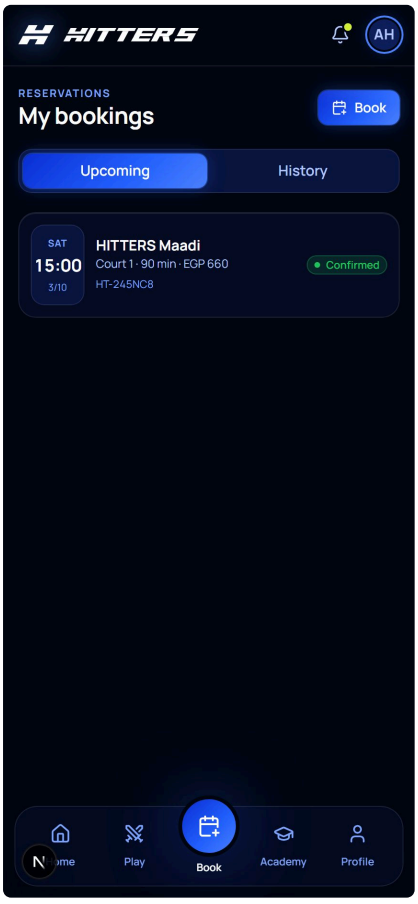

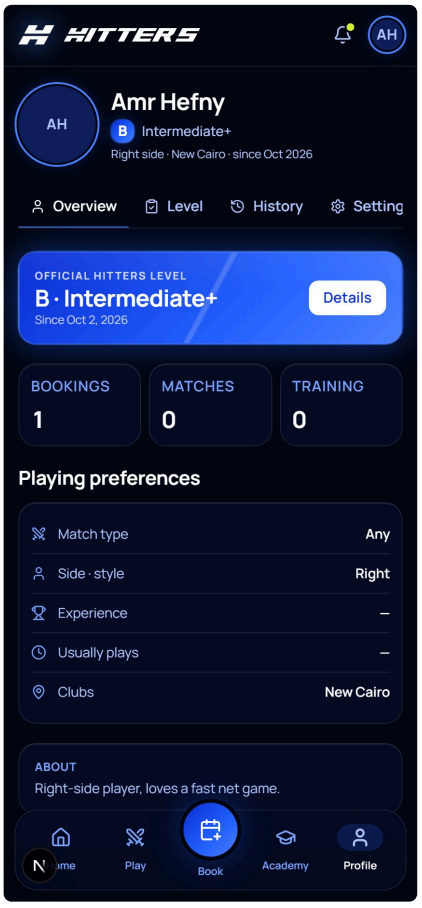

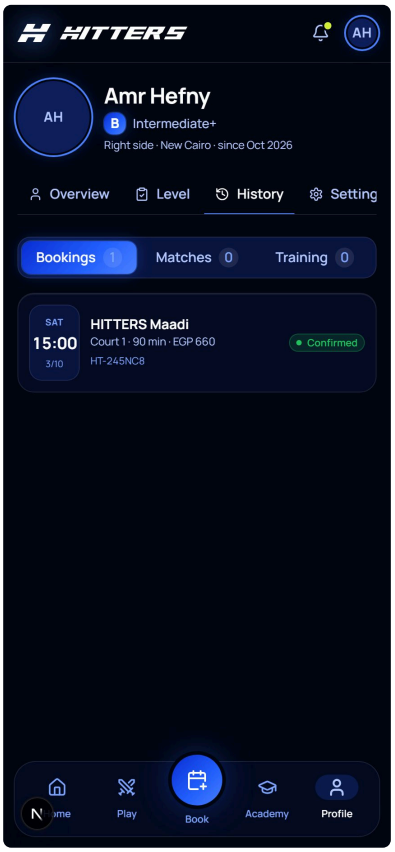

Date	Commit	Change
3 Oct 2026	ab90c74	Academy: trainer profiles with clubs, levels, rate and lesson lengths; weekly availability and time off; private lessons (overlap-proof, requests, 12-hour policy, reschedule, attendance, progress notes); programs with generated sessions, level and age rules, capacity, ordered waitlist and attendance; prepaid packages with credits, expiry and refunds; venue payments for lessons, enrollments and purchases; trainer workspace and admin pages
3 Oct 2026	be6b801	Matchmaking: deterministic rules engine with explainable reasons, Find a match, join requests (solo and pair, pending, waitlisted, accepted, declined, withdrawn, expired), organizer review and locked approval, pairs with confirmation and challenges, academy matchmaking rules in admin settings

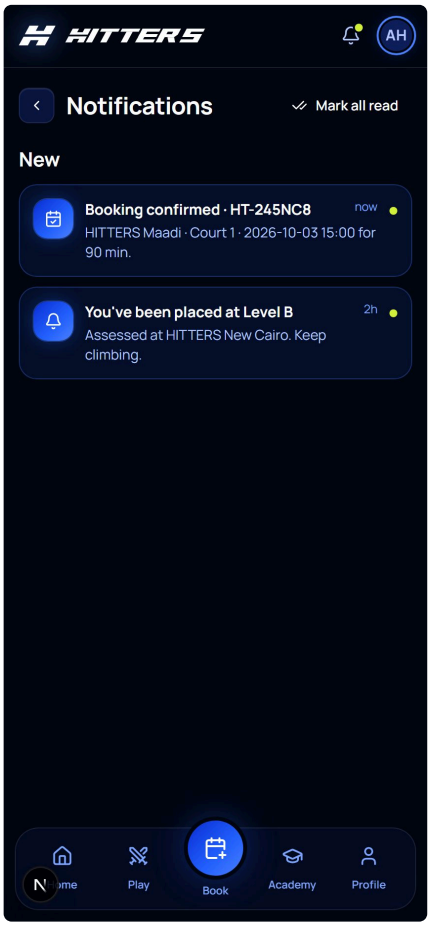

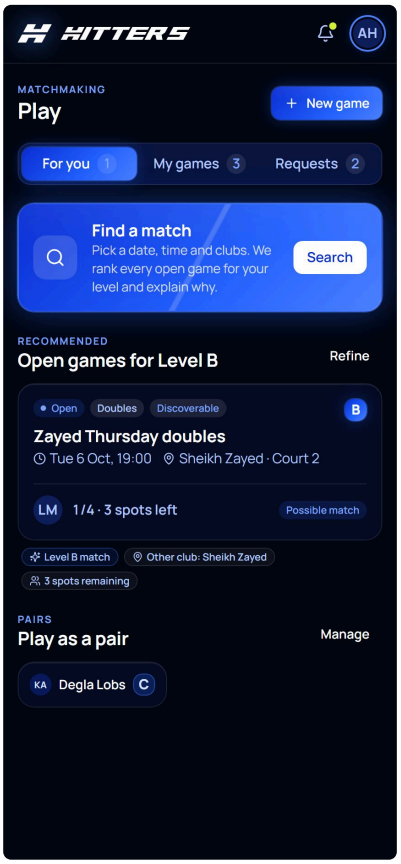

Date	Commit	Change
3 Oct 2026	d03c262	Games on bookings: formats, invitations players accept themselves, draft to completed states, discover tab, organizer controls, admin games list, booking cancel and reschedule cascade; join-request model reserved for the next phase
3 Oct 2026	32cc139	Proposal PDF (docs/HITTERS-Proposal.pdf) with the full screenshot set; page galleries moved to the Player app pages and Admin pages tabs.
3 Oct 2026	30f6c72	Player profiles (photo, preferences, preferred clubs and times, self-reported level) and the assessment workflow: requests, scheduling, results, level changes, configurable level definitions, training records, member detail page
3 Oct 2026	984129b	Vercel builds regenerate the Prisma client, apply migrations and bootstrap a first super admin
3 Oct 2026	06033d8	Court reservation system: booking, participants and payments as separate entities, exclusion constraint against double booking, player flow, admin and receptionist bookings, cancellation, rescheduling, attendance
3 Oct 2026	89ad049	Multi-location and court management: photos, hours, facilities, booking policy, pricing rules, availability engine, closures, admin calendar, live player location pages
3 Oct 2026	e573cae	Data architecture, authentication and role and location based authorization, 37 tests
2 Oct 2026	9d2dc54	HITTERS design system, brand marks, 25+ components and every screen as a designed shell
2 Oct 2026	f0c819d	Repository scaffold and technical audit

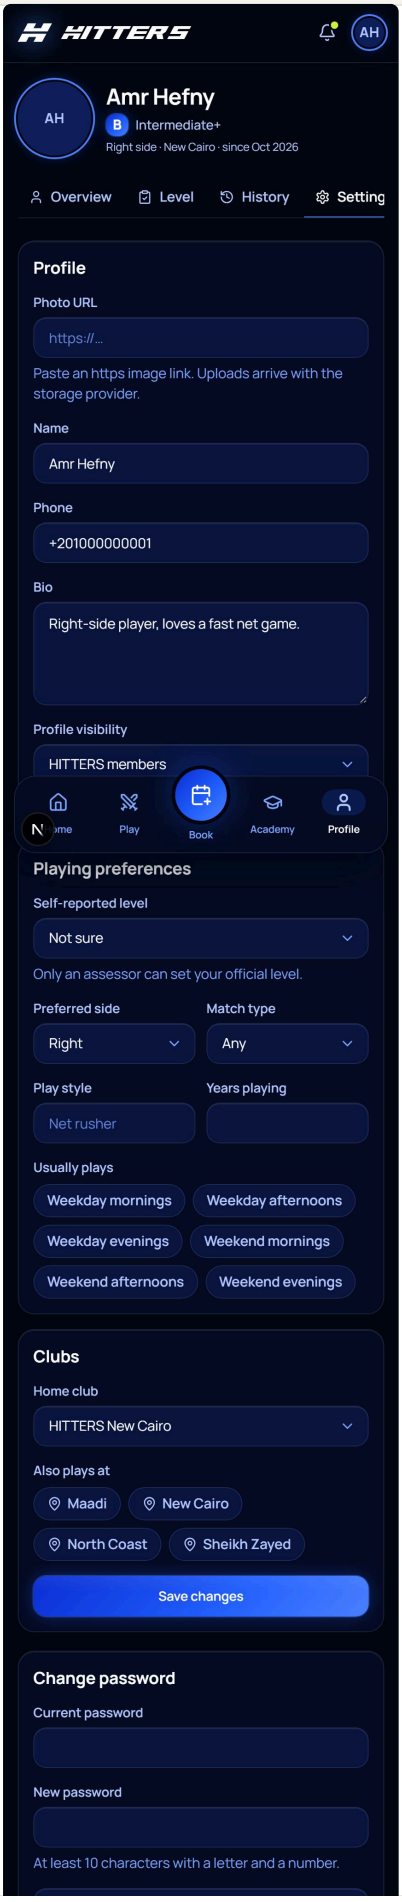

Player app pages

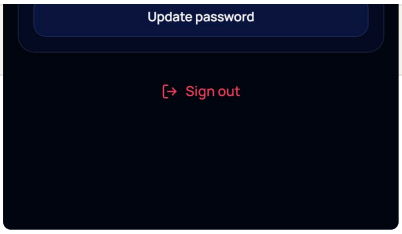

The player app is a 480 px column designed for phones: dark navy surfaces, electric blue actions, a bottom tab bar with the glowing Book action, and one brand card per screen.

Matchmaking pages

Matchmaking is rules-based and deterministic: every recommendation lists the reasons it matched (official level, location, time, spots left), organizers decide every request, and a pair is accepted as a unit or not at all.

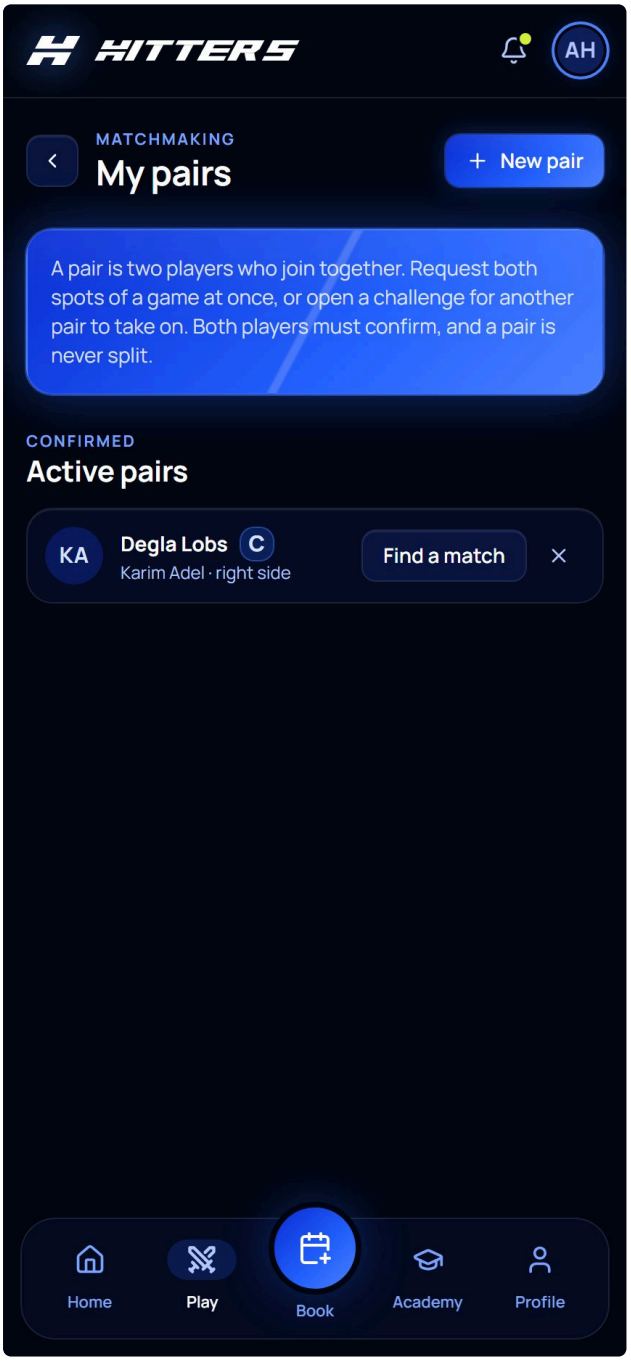

Play, For you	Find a match	Requests
		
Ranked open games for my level with the reasons, Find a match, my pairs	Day, time window, clubs, solo or pair; results ranked with reasons; hidden games explained	Players asking to join my games with level and reasons, pair invitations, games I asked to join

Organizer review	Request to join	My games
		

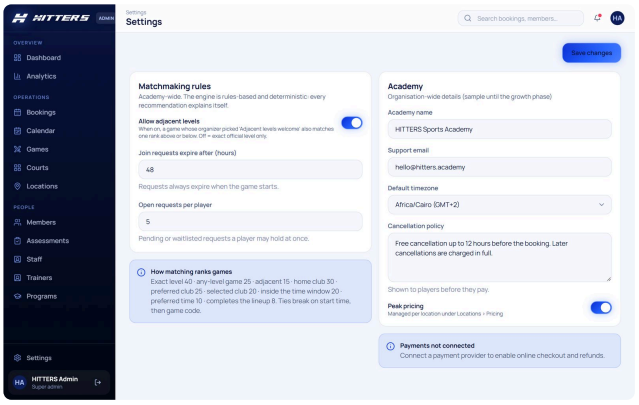

Organizer review	Request to join	My games
		

Organizer review	Request to join	My games
Who is asking, official level, side, spots needed, message, compatibility now, games played together, accept or decline	A compatible player sees the match reasons and asks for one spot (or both as a pair); the organizer decides	Invitations with one-tap accept or decline, then upcoming games with pending-request badges

Pairs

Admin: matchmaking rules

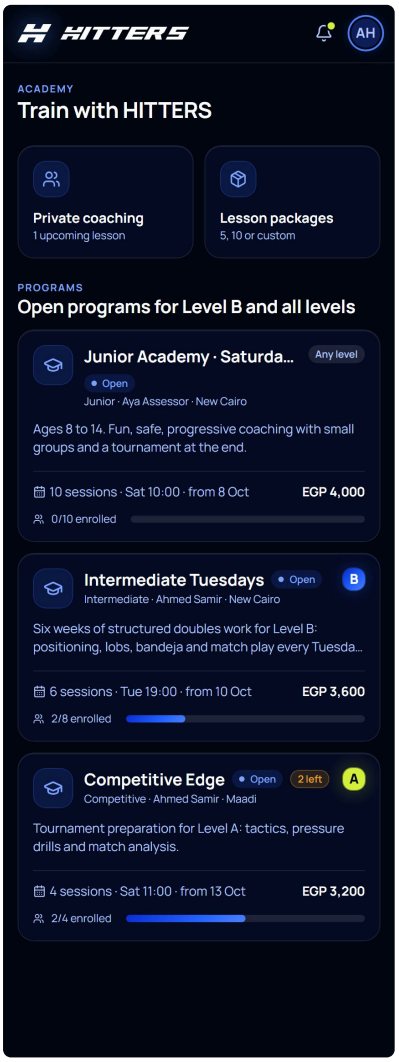

Pairs	Admin: matchmaking rules
Propose a partner, confirm, find a match together or open a challenge	Allow adjacent levels, request expiry, open-request cap, and the scoring table

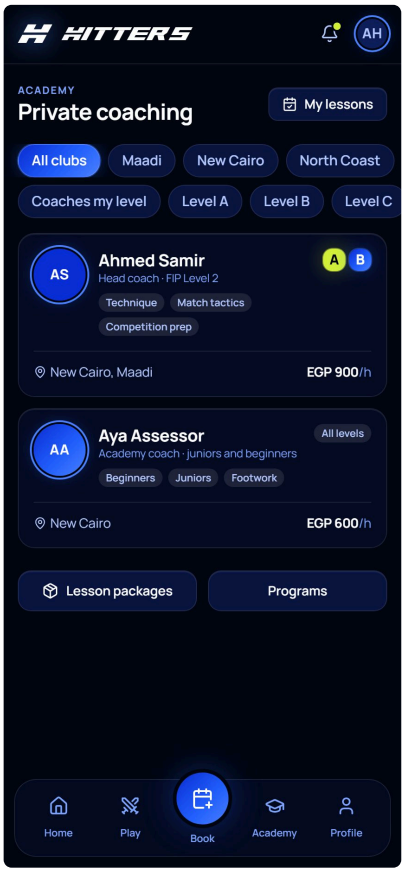

Academy pages

Coaching lives on one slot engine: what a player sees in a coach's availability is exactly what the booking service accepts. Trainers see only their own lessons, students and notes; staff see their clubs.

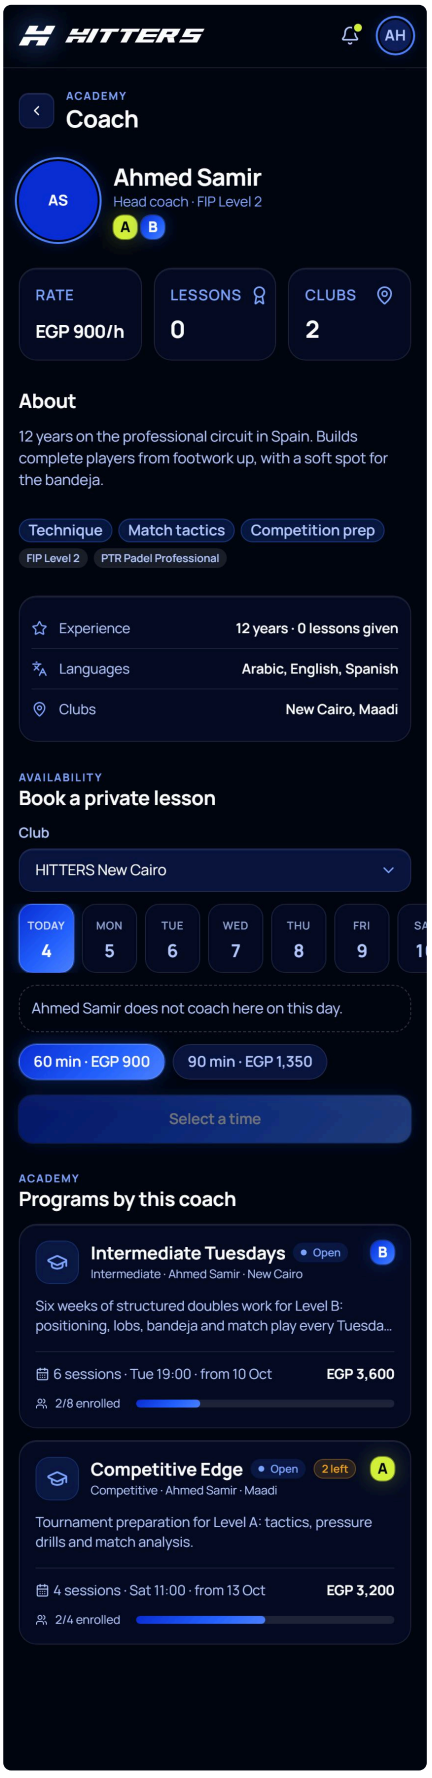

Academy home

Coaches

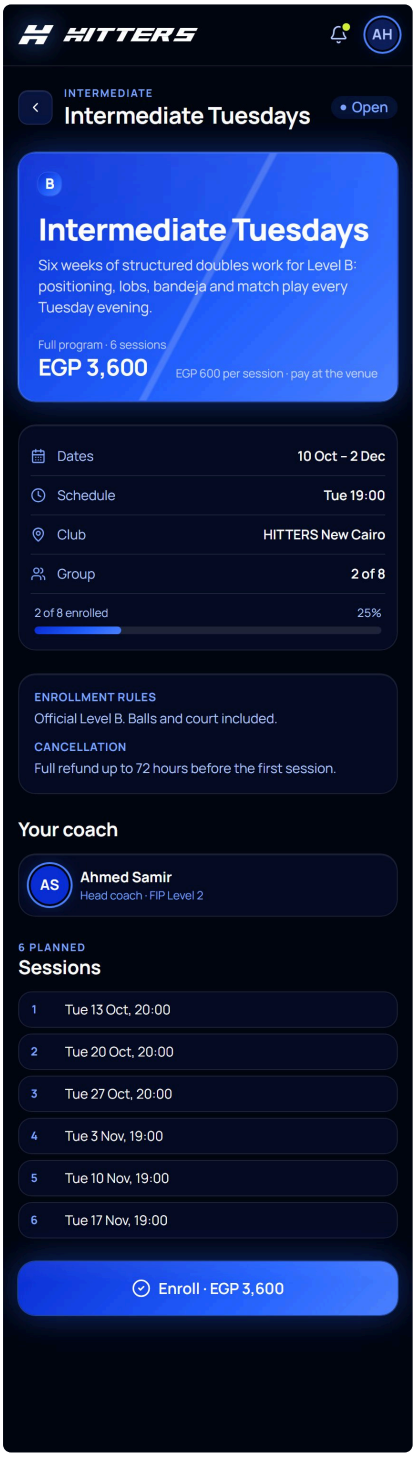

Coach profile and booking

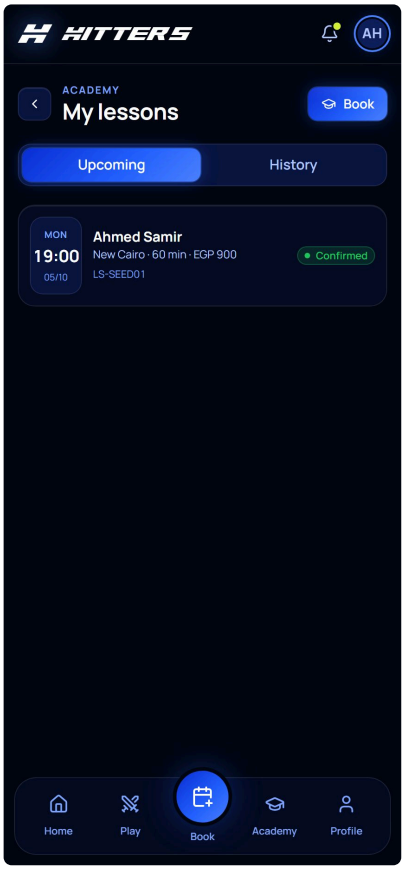

Academy home	Coaches	Coach profile and booking
Private coaching and packages, my programs, open programs for my level	Filter by club and level; specialties and hourly rate	Bio, qualifications, languages, levels; pick a club, a day and a free time; pay at the venue or with a package credit

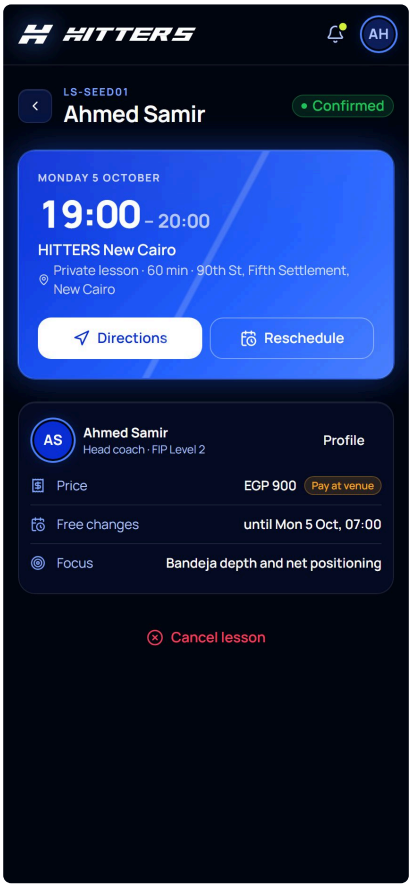

Program

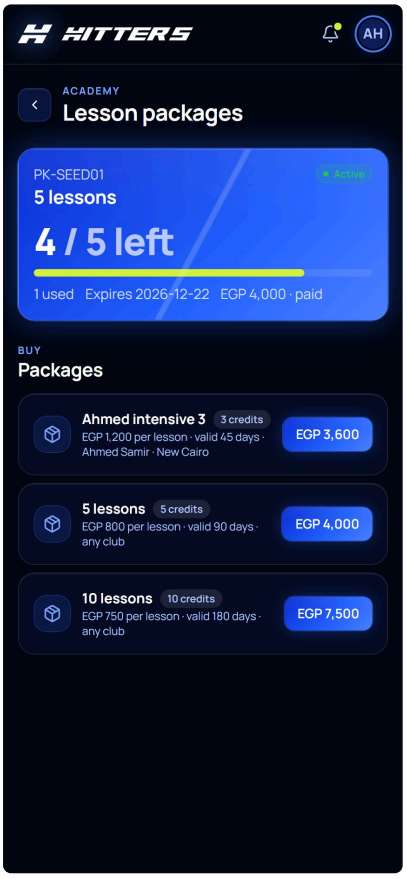

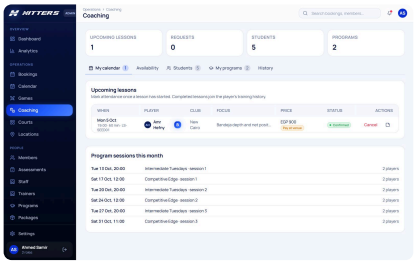

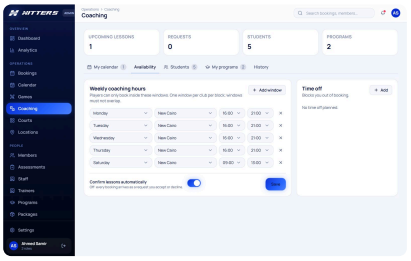

My lessons

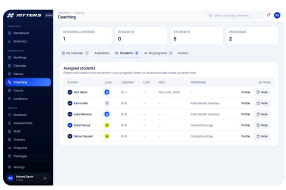

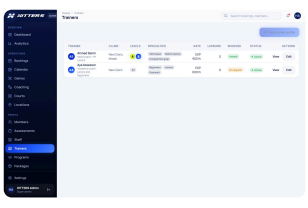

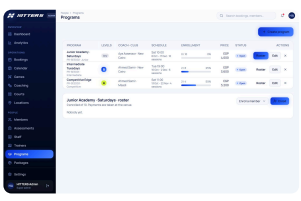

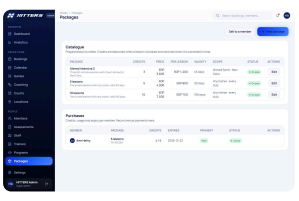

Lesson

Program	My lessons	Lesson
Dates, schedule, group size, rules, coach, every session with attendance, enroll or join the waitlist	Upcoming and history	Time, coach, price or credit, free-change window, reschedule and cancel, notes shared by the coach

Packages	Trainer workspace	Weekly availability
		
Credits left and expiry, catalogue, lesson history	Upcoming lessons and requests with accept, attendance and progress notes; program sessions	Hours per club, auto-confirm switch, time off

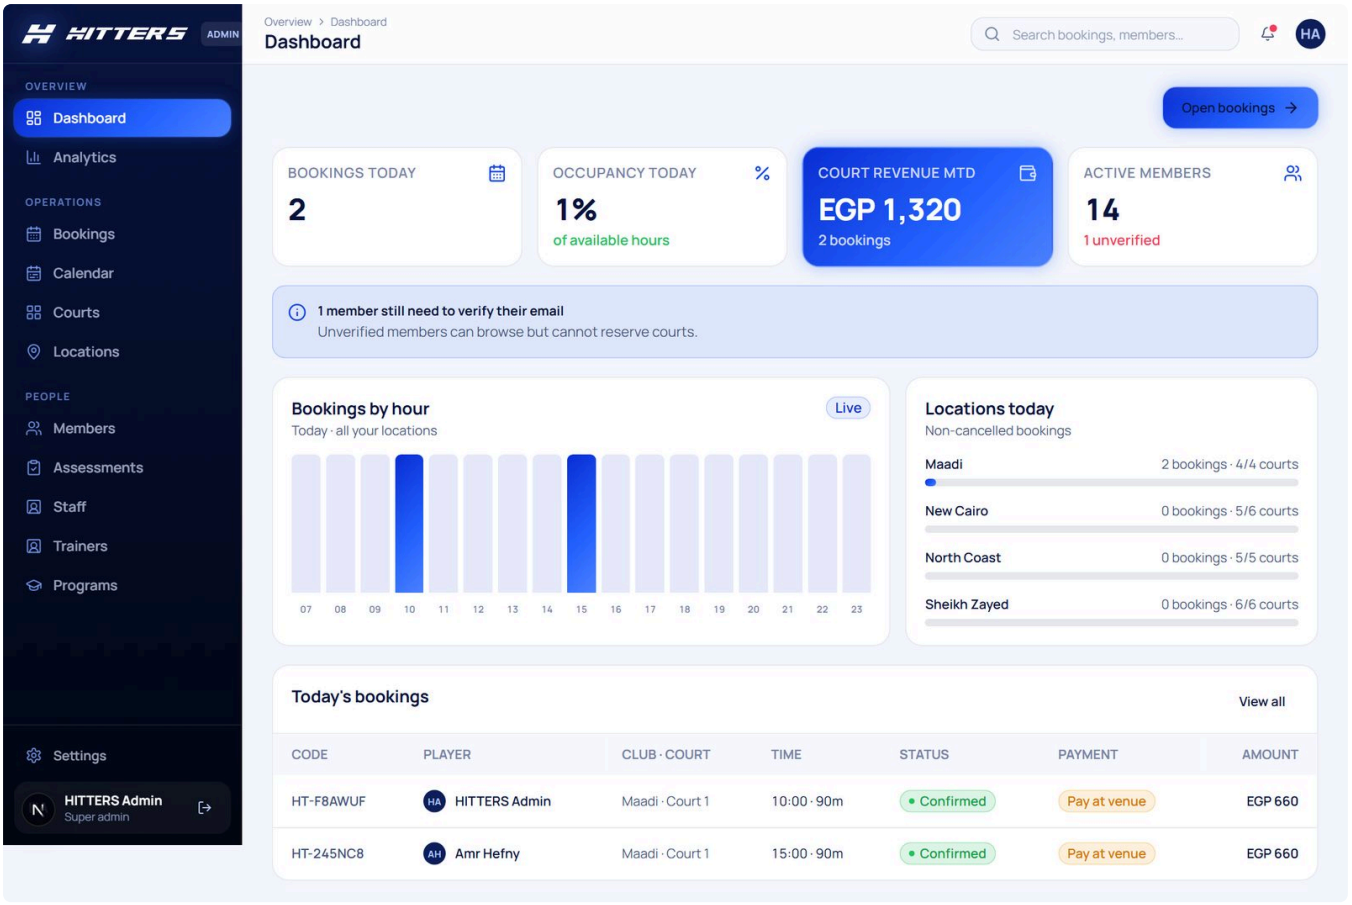

Students	Admin: trainers	Admin: programs	Admin: packages
			

Students	Admin: trainers	Admin: programs	Admin: packages
Assigned players with lessons, last and next session, programs and private notes	Profiles with clubs, levels, specialties, rate, booking mode and status	Schedule, enrollment progress, status, roster with waitlist, member enrollment and payments	Catalogue and member purchases with credits, expiry and payments

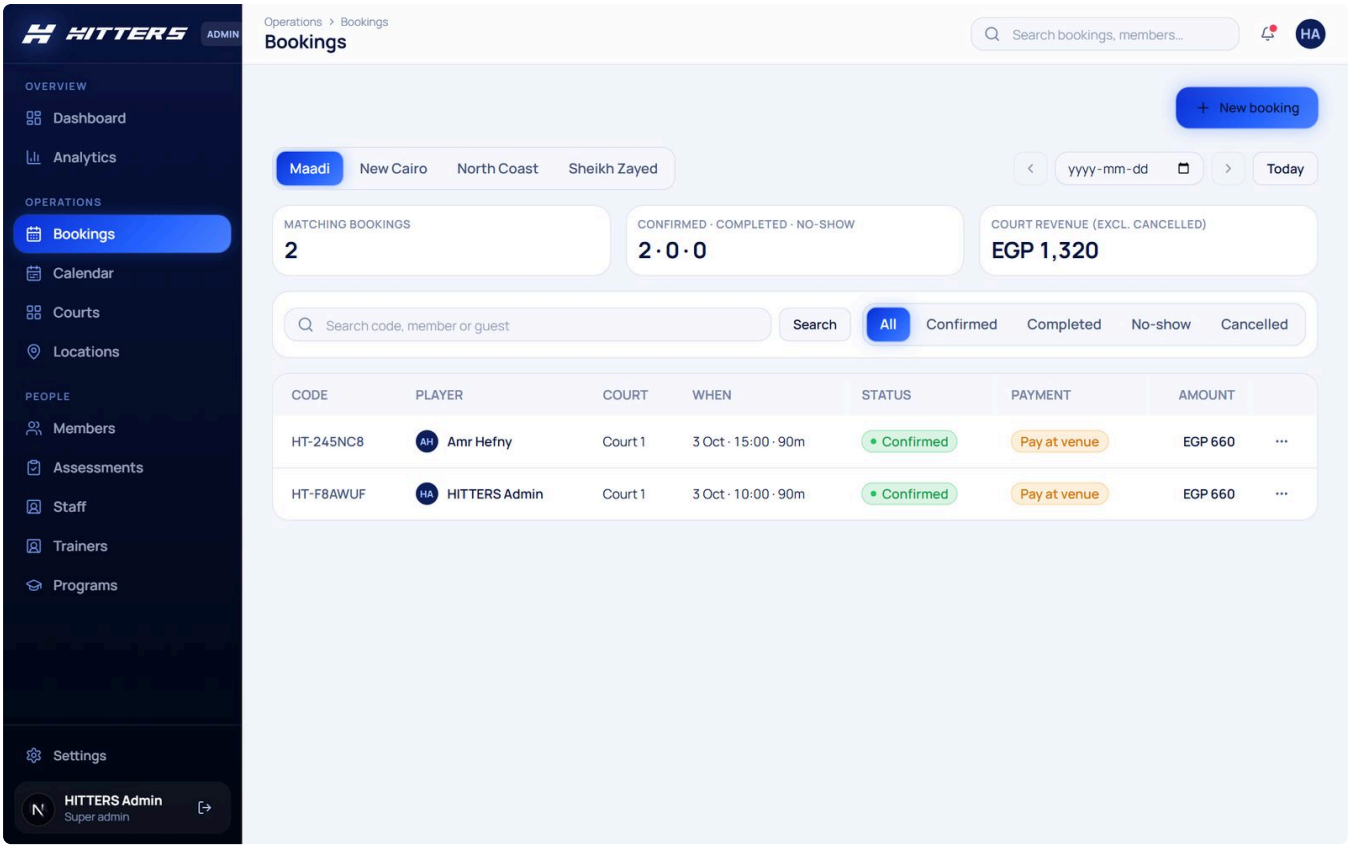

Admin pages

The admin is desktop-first: a navy sidebar grouped into Overview, Operations and People, and a light content area with dense tables and calendars. Every page shows only the locations the signed-in staff member may act on, and every write is audited.

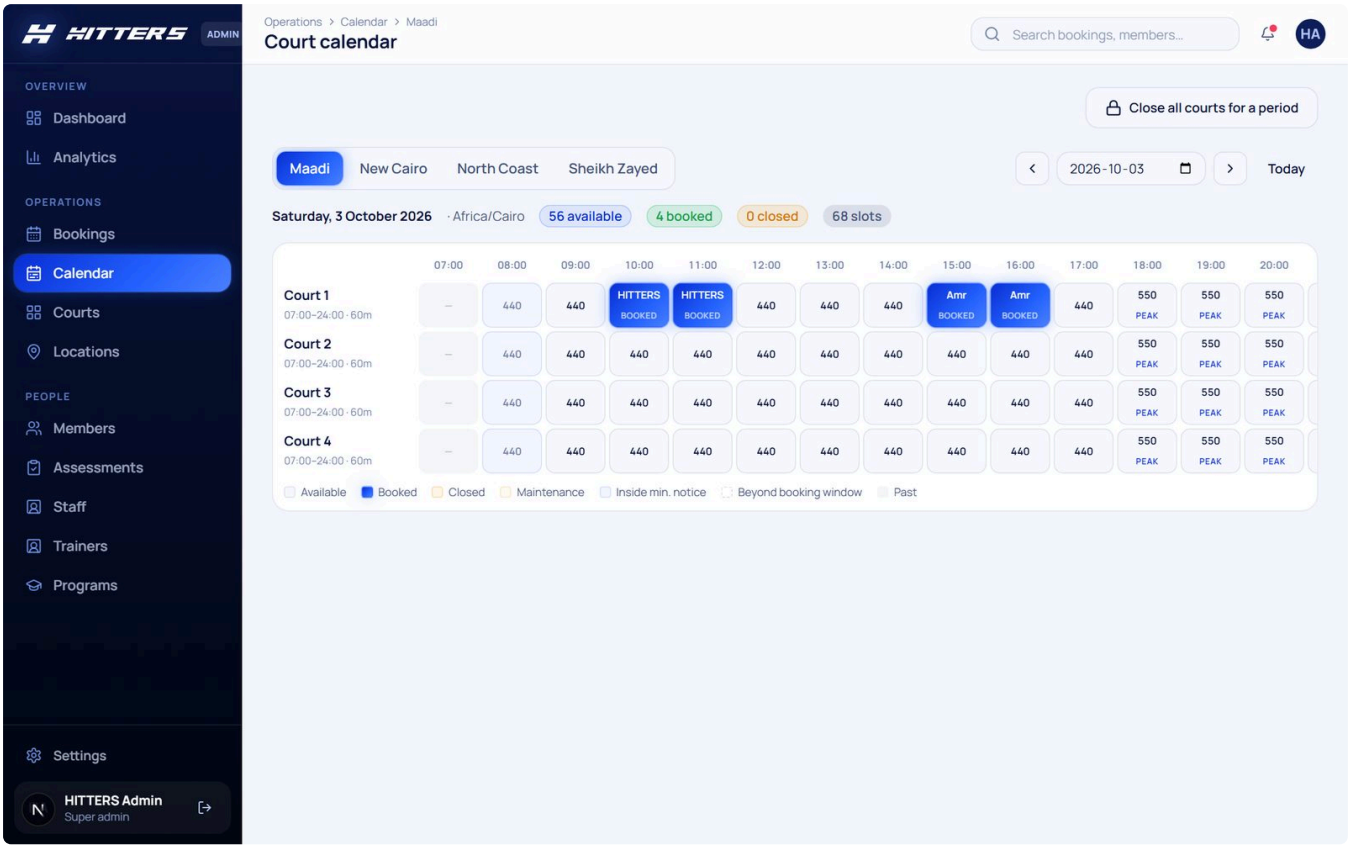

Dashboard. Today's bookings, occupancy by hour, revenue to date and member counts across the staff member's locations.

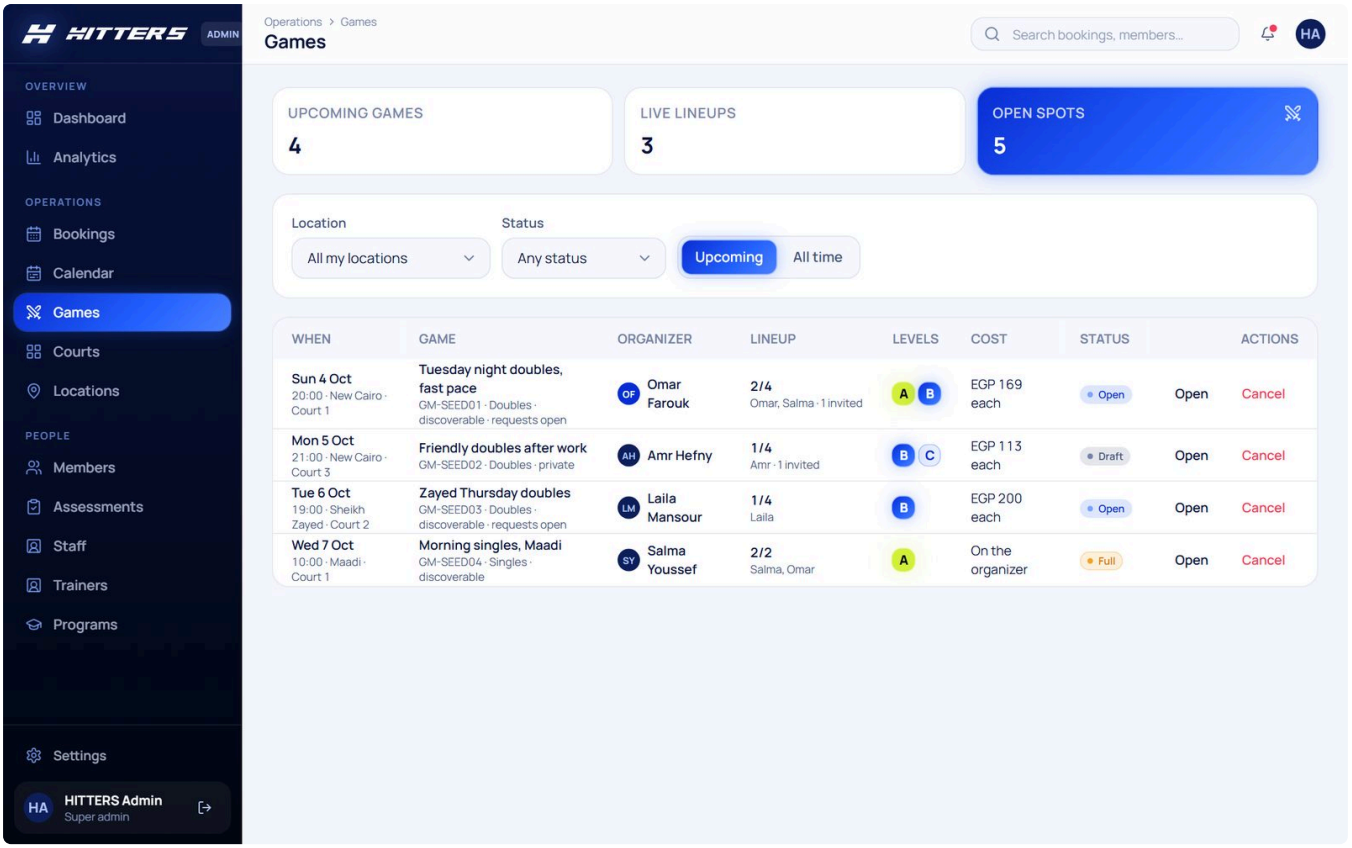

Bookings. Filter by location, day and status; search by code, member or guest; create manual or walk-in bookings; cancel, record attendance and venue payments from the row menu.

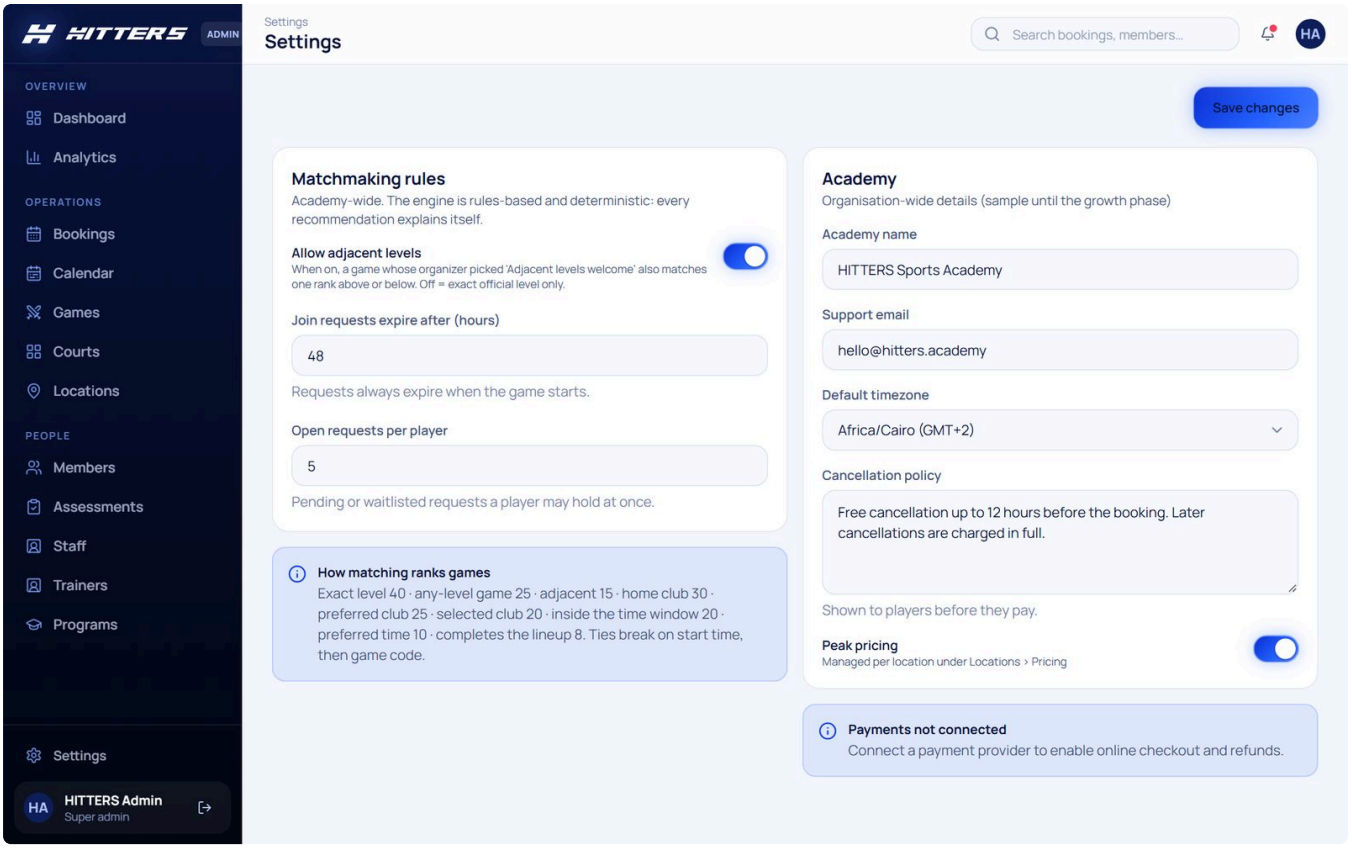

Court calendar. Courts by hour for any date with live prices and booked cells; click a free cell to block it, or close all courts for an event.

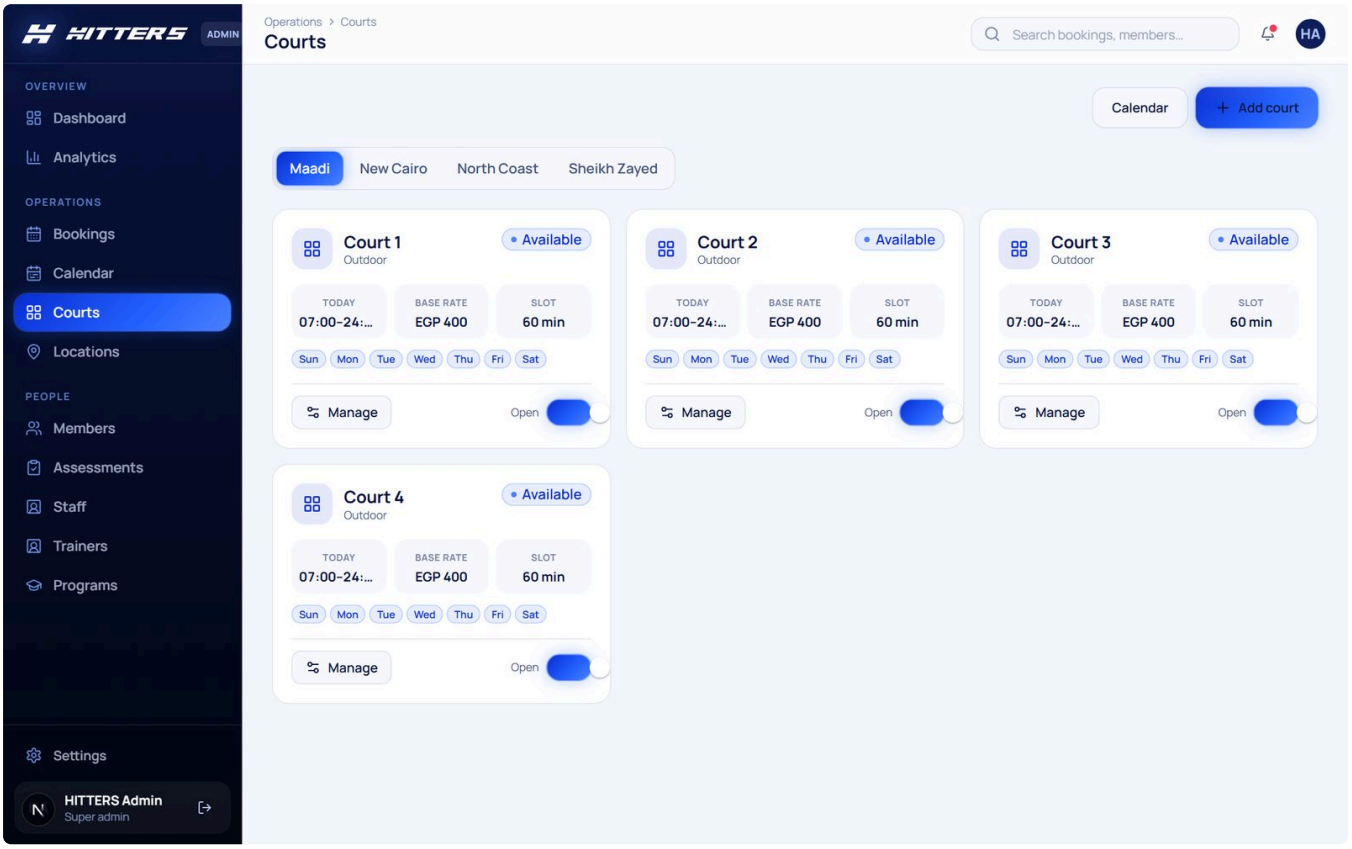

Games. Every game organized at the staff member's clubs with its lineup, levels, cost and status; managers and receptionists can cancel one, and the organizer and players are notified.

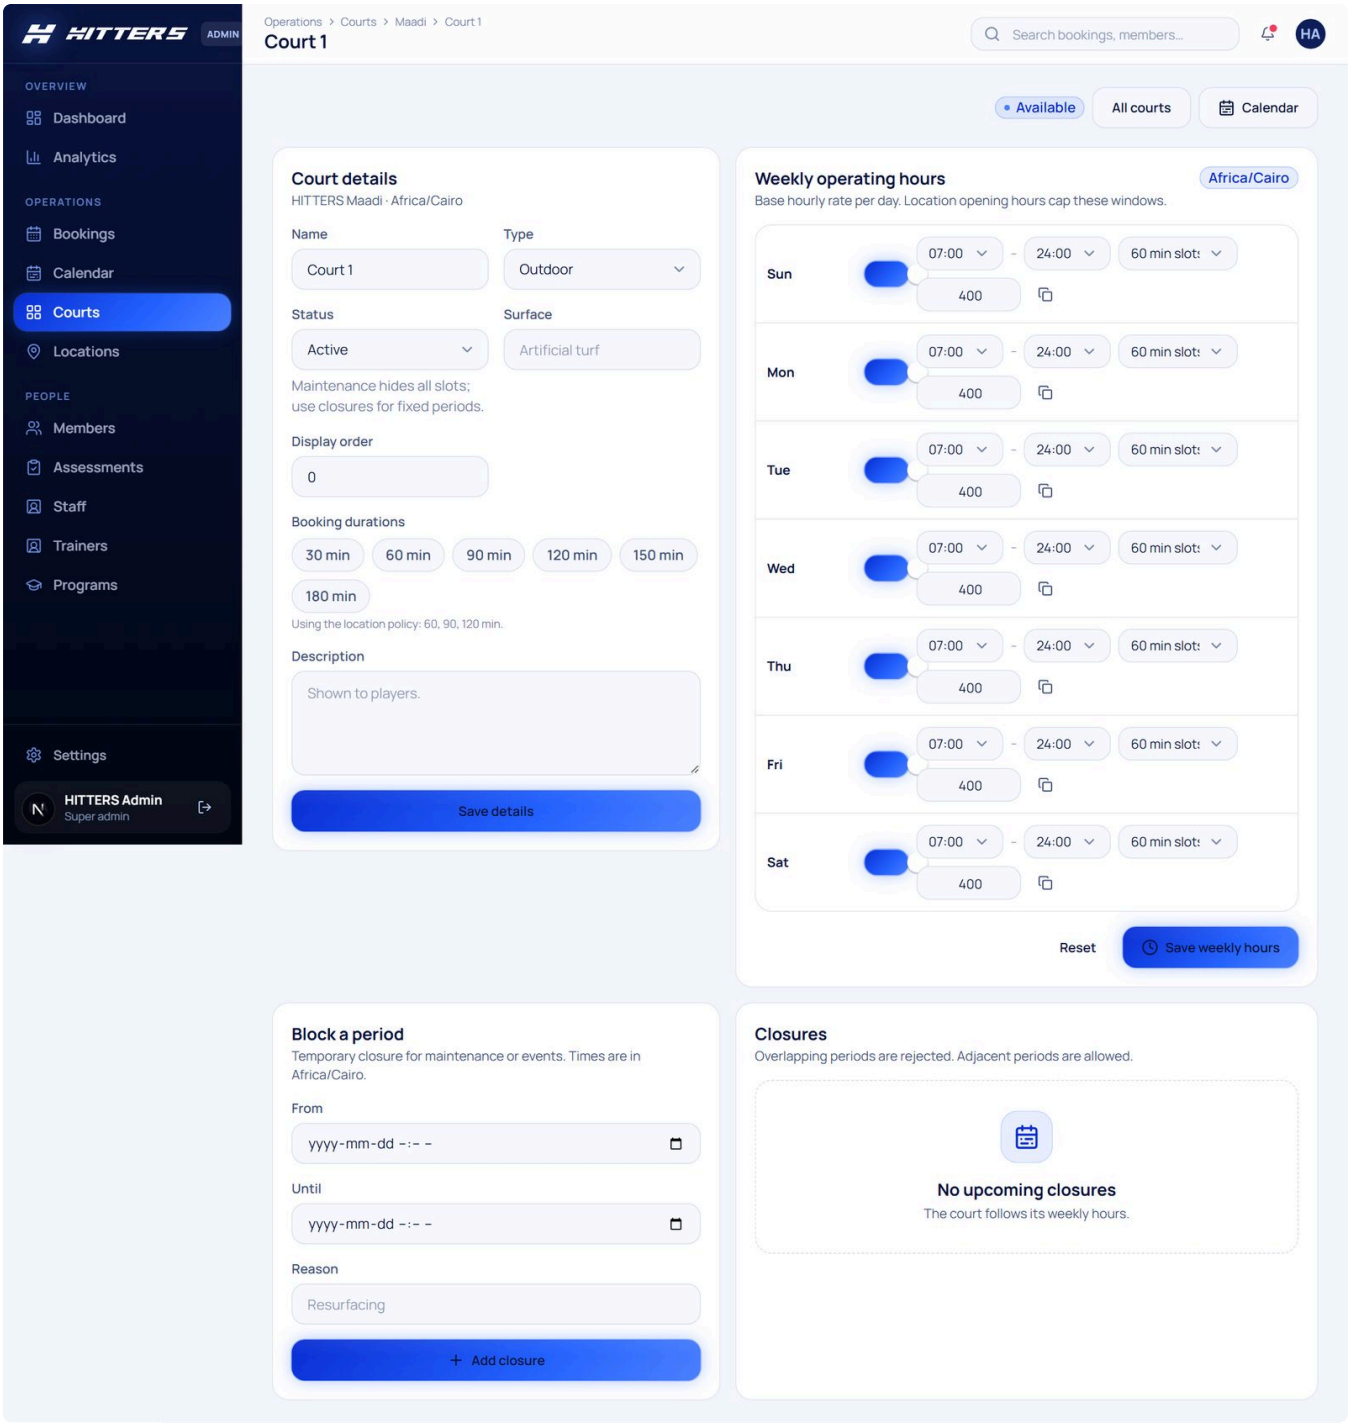

Settings. Academy-wide matchmaking rules: allow adjacent levels, request expiry, open-request cap, and the scoring table the engine uses. Only global roles can change them.

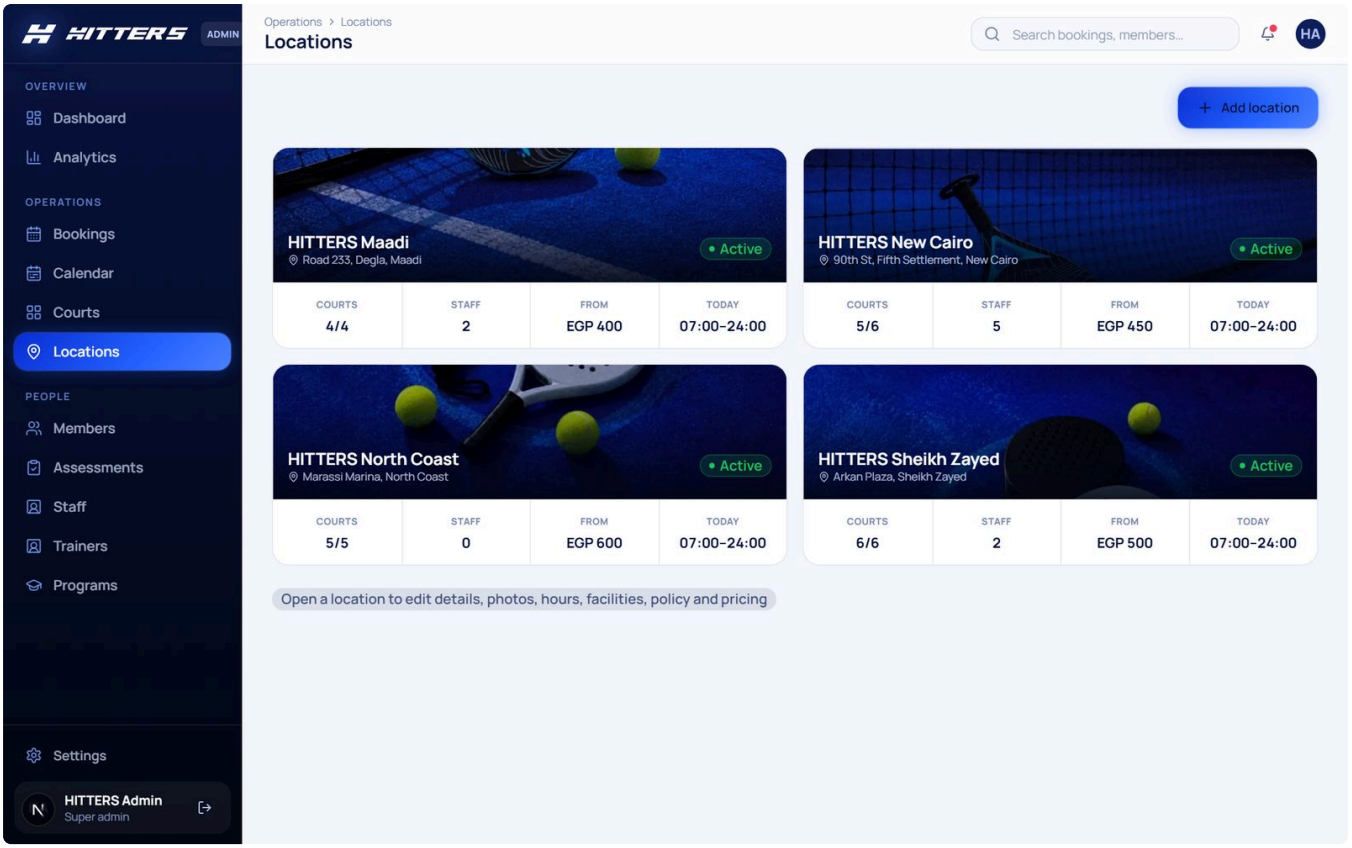

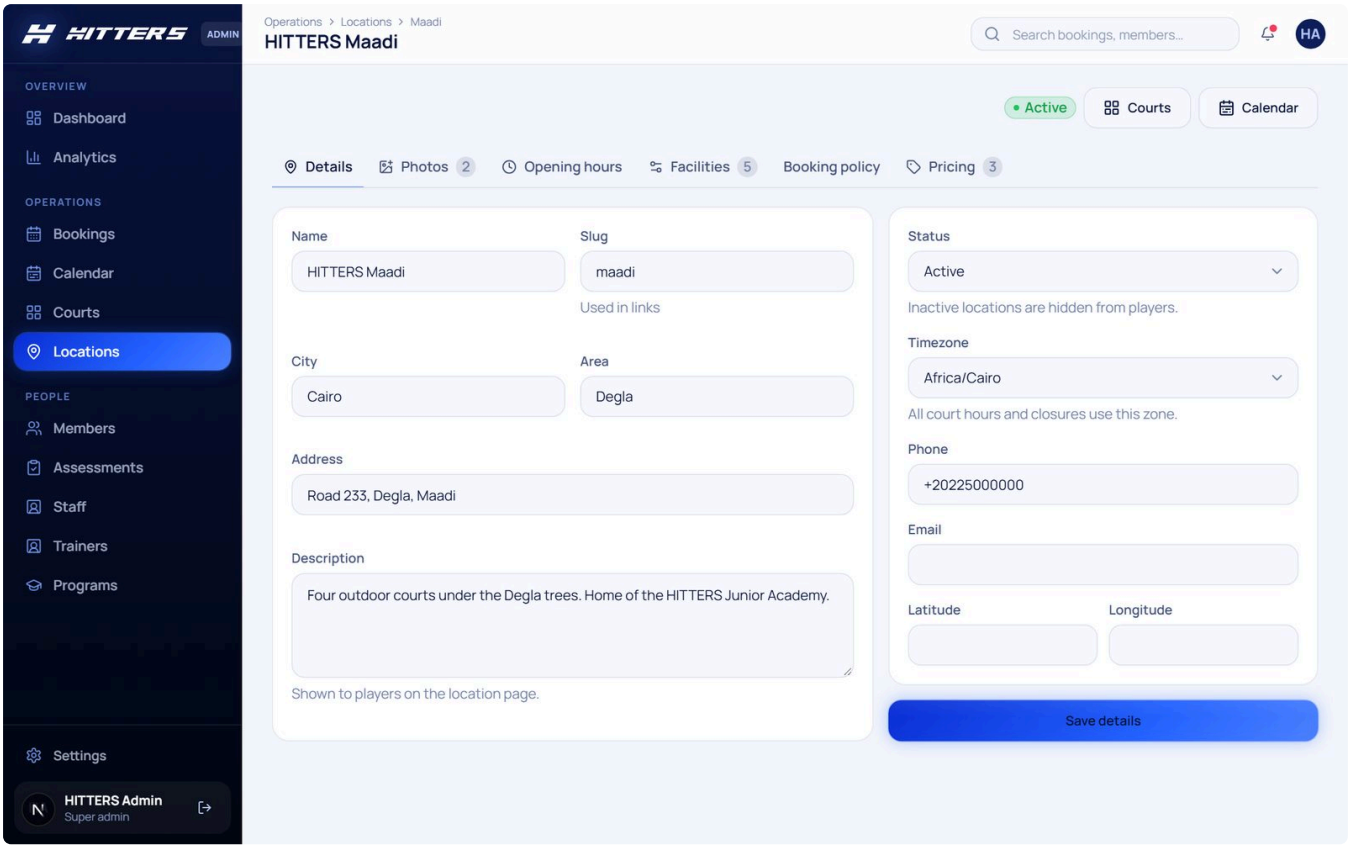

Courts. Status, weekly template summary and maintenance toggle per court; each court opens into details, operating hours with base rates and closures.

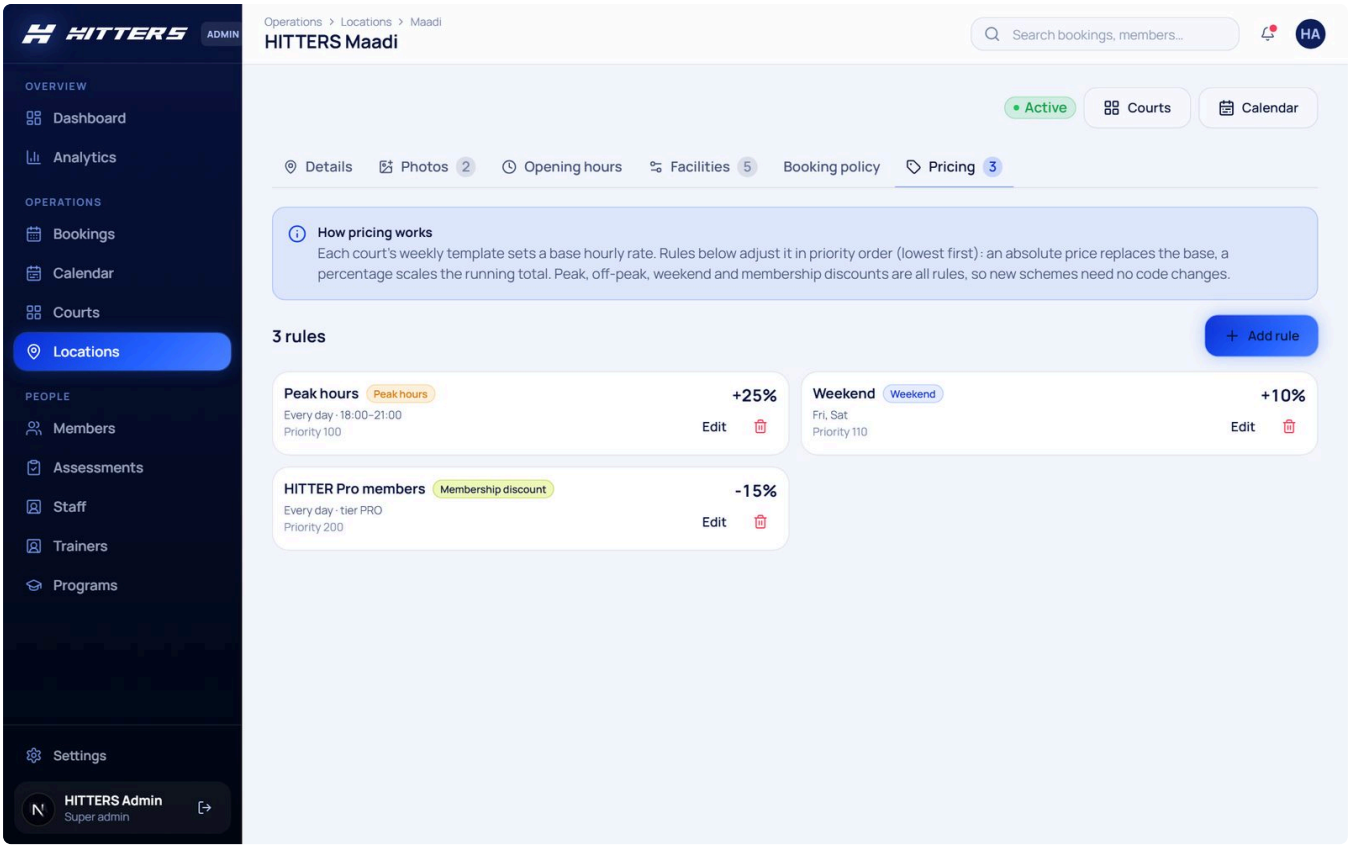

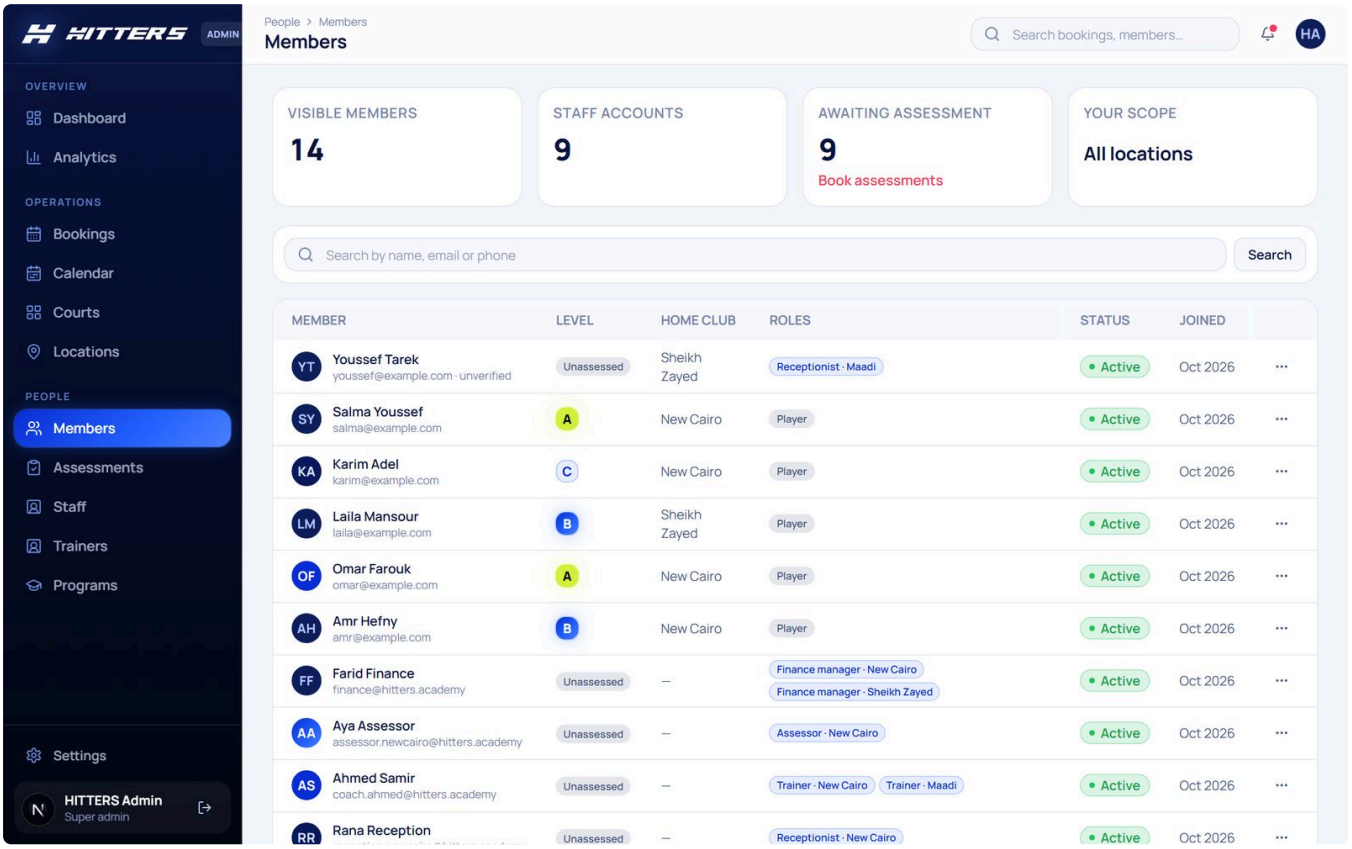

Locations. Overview cards and a full editor: details and status, photos, opening hours, facilities, booking policy and pricing rules.
